Run Advanced Program 20

© 2026 Terminator Training Method, LLC. All rights reserved.

INTRO TO TTM RUN ADVANCED

Welcome to TTM Run Advanced. This program is aimed at intermediate to advanced runners looking to take it to the next level in mid distance running. It's one of the most unique programs on the market—the running and supporting strength work are programmed in a highly nuanced manner that only decades of trial and error, programming, education and obsessive iteration can make possible.

You'll run fast, far, uphill, downhill, and everything in between. Whether this is your first TTM running program or you've just completed the 2&5 Mile Program, expect to further enhance your run speed, technique and endurance capacity.

It's not for the faint of heart. The run mileage is substantial—beginning in the mid 20-miles per week and culminating in the low 50s. As such, expect to be challenged beyond your comfort zone. With that, a few precautions up front:

- If you're currently running less than 25 miles/week, I strongly suggest starting with the 2&5 Mile Program. Run it in its entirety, take ~a week or easy, then jump onto this program. Starting this with insufficient volume will limit potential results...at best. More importantly, it'll increase injury risk.

- If your current lifestyle is not pro-recovery—great sleep, low stress, pristine nutrition—you'll struggle on this program. Running is a highly fatiguing endeavor that's inherently rougher on the musculoskeletal and CNS than most others. Therefore, your habits outside of training are equally important as the training itself—if not more. Need more guidance on nutrition, run fueling and the key aspects of optimal recovery? Check out our Recovery and Nutrition guide.

- If you're coming off a lower body injury or feeling generally 'banged up', I suggest postponing this program while rehabbing your issue. From there, rebuild a base and follow the 2&5 Mile prior to starting this program. Many lower body injuries resolve on their own with time and appropriate training adjustments. But they tend NOT to resolve on their own if you continue subjecting it to stress (i.e. this running program). Seems obvious, but type A's (most people reading this) are stubborn and often overlook it.

RUNNING MECHANICS & DURABILITY

Generally, a lower run volume program can work even if your running mechanics lack. As long as you've built a base with proper mileage and intensity progressions, you can usually get away with leaks in the chain.

This program doesn't fit that mold. As such, mechanics are key.

To ensure you're setting yourself up for maximum gains and minimal injury risk, consider the following cues:

Running Mechanics Cues

A .Upper Body (Posture + Trunk)

1. Run tall, not rigid - Stack ribs over pelvis. Avoid lumbar extension or slouching
2. Slight forward lean from the ankles - Not from the waist. Whole body tilts as one unit
3. Relax face and jaw - Tension high = tension low
4. Chest proud, shoulders relaxed - Avoid shrugging/collapsing forward
5. Head neutral, over midline - Don't reach with your chin or look down at your feet

B. Arms

1. Drive back, not forward - Power comes from the elbow driving behind you
2. Elbows ~70–100° - Don't let them straighten/bend excessively
3. Hands brush waistband - Prevents excessive forward cross-body swing
4. Relaxed hands, no tight fists or "thumbs up dude" - wasted tension/looks goofy (rule #1: always look cool)
5. Arms set cadence - If legs are smoked, cue increase arm tempo first

C. Pelvis

1. Neutral pelvis - Avoid anterior tilt (duck butt) or posterior tuck
2. Glutes on - Think slight glute tension at toe-off
3. Hip extension behind you - Push ground back, don't reach forward
4. Level hips - Avoid "Trendelenburg drop" (hip drop) on swing leg
5. Stay tall through the hips late in runs - Fatigue leads to collapse leads to braking

D. Foot Strike

1. Land under your center of mass - If the foot is way out front, you're braking
2. Midfoot bias - Not forced forefoot, not aggressive heel strike
3. Quiet feet/no smashing - no need to kill every bug in your path
4. Quick contact, don't sink - Avoid over-striding or prolonged ground time
5. Push back, not up - Vertical bounce wastes energy

© 2026 Terminator Training Method, LLC. All rights reserved.

RUNNING MECHANICS & DURABILITY CONTINUED

E. Turnover (Cadence - the MOST universal 'fix' for non-elite runners)

1. Shorter, quicker steps - Especially when fatigue hits
2. Spin the legs under you - Avoid reaching for speed
3. Increase cadence before increasing stride length
4. Cadence (see below) 170–190 for most - Context dependent, but a strong heuristic
    i. Taller? Lower end of range (height = proxy for leg length)
    ii. Shorter? Higher end of range
5. If pace slows, don't grind, sharpen instead - Grinding mechanics = breakdown

Cadence - Not a Fix-*all*, but a Fix-*most*

An overarching principle of mechanics is cadence—the # of steps per minute a runner averages. Despite common notions, not everyone's cadence needs to be exactly 180 steps per minute (SPM). But in my experience, most runners' cadence is lower than ideal, and bringing it up would suit them well—not just for injury prevention, but also better run times.

While cadence will vary depending on the intensity of the run, a common error for many runners is accepting an expansive gap between their easy run cadence and race pace cadence (and everything in between). I've seen runners with a 180 race pace cadence and a 150 easy run cadence. This is not ideal for injury prevention.

Remember that easy running is still running. If you can close the gap to ~7-10 steps/minute between race pace and easy pace, you're in a good ballpark. Most people are way outside this. But you can fix it by being more mindful during your runs, aiming to increase it by 1-2 steps per minute week-to-week across all runs (easy, moderate, hard). Don't make the mistake of trying to make significant cadence jumps.

RUNNING ESSENTIALS

I've curated a list of my running essentials on Amazon, including shoes, recovery tools, and gear I personally use and recommend. None of it is mandatory—but having the right tools makes training smoother.

Amazon list

© 2026 Terminator Training Method, LLC. All rights reserved.

RUN TYPES & THEIR PURPOSE

1. Repeats
You'll see 2 mile and 5 mile biased repeats on alternating weeks. Ensure you stick to the pacing requirements. If you find you can't hold paces, don't lengthen your rest periods—slow down. These shouldn't be "see Jesus" sessions, just challenging, sustainable work.

2. Fartlek
Speed Play runs with varying intensities. Great for improving throttle manipulation and pacing discipline. More mentally stimulative than most other quality runs. Farleks herein will be structured with specific pacing and duration ranges.

3. Tempo
Throughout the program you'll see continuous tempo runs. They allow you to bump your lactate threshold by running just below it. (Think of it as raising a ceiling by pushing it up from below, rather than pulling it up from above.) Runs will lengthen over time, and sometimes be followed with more speed development like hills or goal pace intervals.

4. Easy runs
Easy runs are more prevalent in this program than any other TTM plan. They help bridge the gap between quality runs (speed/tempo etc.) and enhance aerobic capacity and durability via more volume. Easy means EASY. Pushing them harder will just accrue more fatigue, detracting from your results. Suggest doing all/most easy runs on non-paved surfaces.

5. Long runs
Each weekend (or day 6) will include a long run. Most are steady, aerobic efforts. Think of them as the foundation upon which all speed and endurance is built. Stick to intensity prescriptions.

6. Long runs w/ quality
Every ~3 weeks, a long run will include quality portions. Some are sprinkled in throughout the run, others added towards the end of the run. Ensure you're sticking to the pacing/RPE gauges so you don't over-shoot them. They're higher fatigue than a typical long run, and will therefore sometimes be equal distance than the long run the week prior.

7. Strides
Strides are a great technique to touch on speed and build running skill with far less fatigue than actual speed work. KEY POINT: Don't turn them into sprints. Execution:

- Begin with a light jog, and gradually build up over 15-30 meters to your your goal pace (typically a hard endurance pace, e.g. ~1 mi TT)
- Hold it for 15-30 seconds (as prescribed in the program). Keep your running form relaxed, focusing on pristine endurance running technique.
- After you've hit the prescribed duration, gradually slow back down to a jog over 15-30 meters.
- Rest till your heart rate is back into high Z1/low Z2 (usually ~30-60 seconds). Always favor more rest than less to lower fatigue cost. That's one stride.

© 2026 Terminator Training Method, LLC. All rights reserved.

RUN TYPES CONTINUED

8. Pickups
Consider pickups "intra-run strides". You'll execute the stride (speed-up) portion exactly the same. But instead of resting and repeating, it'll be preceded and followed by your normal easy run. Let's say your easy run pace is ~9 min/mile. For a pickup, you'll speed up to ~your 1 mile pace for the prescribed time (usually 15-30 sec). Then, like a stride, you'll gradually revert back to an easy pace. Ideally, compensate following the pickup with an easier-than-usual pace to bring your HR back into Z2 ASAP (i.e. maybe run for a minute at 9:45/mi, then creep back up to 9:00).

9. Hill sprints
Not to be confused with repeats, hill sprints target fast twitch muscle fiber development in a specific manner (running). They aid in faster pushes on speed work and time trials. Consider them SPEED sessions, not cardio sessions. The rest periods are long intentionally—to feel FRESH for every sprint. Don't feel fresh when the rest ends? Rest LONGER till you are. Cheating this will defeat the purpose.

10. Time trials
Included mid/post program to assess current status, track progress and establish data you'll use to pace quality runs. Ensure you're fresh—well slept, well fueled, not banged up—for all of them. If you need to bump one a day or 2 right, do it.

Key Time Trial Notes: The mid-program time trials are on the heels of an entire phase with just a weekend off. If you're not quite as fast as you'd like to be, don't stress it. It's fatigue masking your fitness. At the end, you'll do a full taper before testing.

Also note: Time trials are highly sensitive to fatigue, stress, hydration, fueling status, weather, test anxiety, and other factors. These can all have acute effects on your performance on a given day. If you're disappointed in your time, note that it could easily just be a bad day, and consider running another 2-3 days later. (I've had clients run 3-4 minutes faster on a 5 mile and 1-2 mins faster on a 2 mile 2-3 days after their first attempt).

© 2026 Terminator Training Method, LLC. All rights reserved.

LIFTING WARMUPS + RAMP UPS

Upper Warmup — all upper, push or pull days (you can adjust this as you prefer)
Run thru the following 2-3—warmup should cap at 10 minutes:

- Dead hang x30 sec
- Pushup plus x6-8 slow reps
- Band pull apart x12-15
- Overhead KB/DB walk (light load) x 25-40 yds/hand
- Prone PVC Y-Ws

Lower Warmup - all lower body days
Run thru the following 2-3—warmup should cap at 10 minutes:
Deadmill walk or backwards sled drag x 1-2 min
Light goblet squat w/ heels elevated x 6-10 reps w/ a pause at depth
Single leg toe touch/light RDL x 8-10/leg
Pogo hops x 20-30 sec
World's greatest stretch x 2-3 reps each side

Ramp Ups
Ramp up sets should be done on all lifts, even following a proper warmup. Keep reps low, rest periods long.

Example ramp up set configuration:

Lift: Hex Bar DL x4-6
Hypothetical working weight: 350lbs
Rest: adjusting load between sets

Set 1: 135x5-7
Set 2: 225x3-4
Set 3: 275x 2-3
Set 4: 315-330 x 1-2
—full 2-3 min rest—
Working set 1 at 350lbs

*On upper days with one lower body lift, perform some ramp up sets with lighter load prior to the lift. I.e. Push day with a walking lunge amidst the session:

- 1x5-7 reps/leg w/ bodyweight (rest as needed)
- 1x3-5 reps/leg w/ ~50% your working weight (rest as needed)
- 1x2-3 reps/leg w/ ~75-90% of your working weight (rest as needed)
- (after a full rest) First work set.

Ramp up heuristic:
Reps = low early, progressing lower as you approach work set 1
Weight = jumps big early, progressing smaller as you approach work set 1

(Most people either skip these or do too many reps. Both are bad ideas.)

PRE-PROGRAM TIME TRIALS EXPLANATION

It's strongly suggested to begin the program with a recent 2 and 5 mile run time trial (or race/PT test in which you've aimed for your fastest time). This will allow you to seamlessly determine your pacing for all quality runs in the program. If you've just finished TTM 2 & 5 Mile Program, you can simply use the post-program times for phase 1 of this program. If not—and if you haven't run time trials or raced these distances in the last 2-3 weeks—I suggest running a 2 and 5 mile prior to starting (if you have 5k and 10K goals, you can adjust to those distances)

If you fall into this boat, abide by the following guidelines.

- Split them up by at least 48 hours
- Run the 2 mile prior to the 5 mile (not required, but suggested).
- Perform the minimum run warmup (detailed below) or your preferred warmup prior to stepping off.
- Allow at least 72 hours from your last time trial to day 1 of the program

Suggested time trial structure (assuming you'll start program on a Monday):

- Monday or Tuesday (1 week or 6 days before beginning week 1): 2 Mile TT
- Thursday or Friday (4 or 3 days before beginning week 1): 5 Mile TT
- Weekend: off or very light runs/cross-training
- Monday (Minimum 72 hours post 5 Mile TT): Day 1, Week 1

Mid and post-program time trials will be included inside the program.

Fatigue Mask: On 

Since you're an experienced runner, you're likely aware that progress is not linear. Just like you can't expect to be stronger every single week with lifting, the same applies to running. At times, fatigue will mask your fitness, especially later in a phase.

What's this mean? Although you're physically capable of hitting a certain pace, fatigue (which is transient) can limit your ability to display it on a given day.

This doesn't mean you should skip the workout (unless it's trending over several sessions). It doesn't mean you need a knee-jerk deload. It doesn't mean you should re-do it the next day. It's just a reminder that bad workouts happen, and expectation management is crucial. Good news: running while wearing a fatigue mask is still beneficial, even if you can't hit desired paces. On higher fatigue days, lean towards RPE > pacing.

RUN SESSION GUIDELINES

Distance or Duration — Your Choice
You'll notice that all easy runs are programmed with a mileage or duration option. The reason for it is simple: some people prefer mileage, others prefer duration. Don't overthink it—whether you choose distance or time, the results won't be altered. Additionally, most of the distances/minutes will match closely for most intermediate/advanced runners. You can choose to abide by either of the two guidelines.

Quality Sessions (speed work, tempo, fartlek, etc.)
These runs will be programmed using known paces from recent time trials to begin each phase, while the subsequent weeks are mostly based on past weeks' performances. It's strongly advised you follow the pacing prescriptions for best results. Note that even if early sessions feel easy, that's ok—speed work isn't supposed to be a Sunday stroll, but it's also not supposed to crush your soul, especially in early weeks.

Pro Tip

Carefully read the notes section prior to beginning the session (good idea for any session, especially on quality days). As an advanced running program, some of these sessions are quite complex. I've done my best to make them as simple as possible with thorough notes, but having a solid understanding of the session prior to starting will make execution more seamless.

Work:Rest
Since everyone's running ability is different, a work:rest ratio is used in the program instead of an exact time (i.e. 1:00 rest may be ideal for 1 runner, but too long or too short for another). Likewise, different rest period durations are appropriate for different goal adaptations. Some adaptations call for longer rest periods, others shorter. As such, you'll see ratios such as 1:1, 1:2.5, 1:.75

Furthermore, some rest periods will be walking, others jogging, and others a mix, again depending on the goal of the session. The work:rest information will be annotated as follows:

Work:Rest = 1:1 (rest=walk)	This means you'll rest for the same duration it took you to run the interval, and during that rest period you'll walk (leisurely).
Work:Rest = 1:.75 (rest=jog)	This means you'll rest for .75 or ¾ as long as the interval took you, and at a light jog (very light, RPE 2-3).

Pro Tip

For any rest period with non-whole numbers (I.e. 1:.75, 1:2.5) I strongly suggest entering your work:rest periods on your smartwatch prior to the workout . The vast majority of smartwatches allow you to do this in their respective app. If you're unfamiliar with it, type in "pre-entering workouts in [smartwatch brand)] watch" on Chat GPT/Grok/Claude/Gemini or YouTube.

© 2026 Terminator Training Method, LLC. All rights reserved.

RUN GUIDELINES CONTINUED

Multi-part workouts

Some quality workouts will have more than one "part". To avoid confusion, refer to the notes for explanations on rest periods between the different parts. There are two styles of multi-part workouts.

When you see a - - - (prescribed rest) - - - this indicates a multi-part workout

PHASE 1 EXAMPLE: SPEED WORK (2 MI/5K BIAS)

1.5 mi easy run warmup plus 3-4 15 sec strides. Allow HR to recover into Z1, then 👇

Part 1 6x200m (pacing will be in notes section)
Work:Rest = 1:1 (rest activity=walk)

however long it takes you to do 200M, walk that same amount of time.

--Rest 2:00– Full rest between pt 1&2

Part 2 4x400m
Work:Rest = 1:1 (rest activity=jog)

--Rest 3:00– Full rest between pt 2&3

Part 3 3x200m
Work:Rest = 1:2.5 (rest activity=walk)
1 mi easy cooldown jog

PHASE 2 EXAMPLE: SPEED WORK (2 MI/5K BIAS)

2 mi easy run warmup plus 3-4 15 sec strides. Allow HR to recover into Z1, then 👇

Part 1 2 rounds of 3x800m (so 6x800 total)
Work:rest rd 1 & 2 = 1:.5 (rest activity=walk)
--Rest 3:00 btwn ROUNDs 1&2 ---

Complete Round 1 (including walk rest activity). Then take 3:00 full rest before starting ROUND 2.

--rest 4:00 btwn PARTS 1&2 ---

Full rest between PART 1&2

Part 2 2 rounds of 3x200m (6x200 total)
Work: rest rd 1 = 1:1 (jog); rd 2 = 1:1 (walk)
----Rest 2:00 btwn ROUND 1&2---

Notice different rest activities for rd 1 and 2. Take 2:00 full rest before starting ROUND 2.

2 mi easy cooldown jog

RUN GUIDELINES CONTINUED

Run Warmup (Speed/Tempo/Time Trials)
Perform this 2-3x thru after warmup run and before workout starts:
Minimum

- 3-4 x 15-20 second strides

In addition to the strides, you can also add a these staples (optional)

- A-skips x 25 yd
- B-skips x 25 yd

If you'd like a longer warmup, you can add as desired from the hill sprint warmup below.

Before stepping off for the workout, let your HR dial back into zone 1 (not resting, not zone 2).

Hill Sprint Warmup

Hill sprints are safer than flat sprints but still require a thorough warmup—not just for the legs, but for the nervous system. The goal is max effort, which requires max preparedness.

On hill sprint days (not to be confused with hill repeats), after your initial easy run, do at least 2-3 sets of (each in succession):

- Butt kicks x 25 yd
- High knees x 25 yd
- Lateral leg swings x 10-12 ea
- Pogo hops x 20-30 sec
- Skips for height x 4-5 skips/leg

After above warmup, before max effort sprint #1: do 3-4 reps on the hill with gradually intensifying efforts. E.g.

- Rep 1: 4-5 RPE
- Rep 2: 5-6 RPE
- Rep 3: 7-8 RPE
- Red 4: 9 RPE

Refer to next page for RPE explanations

Recover fully, then start your workout.

© 2026 Terminator Training Method, LLC. All rights reserved.

RUN EFFORT & PACING GUIDELINES

Running RPE

Learning and refining your subjective effort on runs is key for long-term success. It's especially important for selection prep, where you won't have a smartwatch telling you your heart rate, pace or distance. Here's a quick reference chart (endurance):

- **RPE 1:** Leisurely walk
- **RPE 2:** Brisk walk
- **RPE 3:** Light jog (recovery jog between intervals)
- **RPE 4:** Longer light jog — low zone 2 (easy run)
- **RPE 5:** Beginning of long run - mid/high Zone 2
- **RPE 6:** End of long run - mid mid/high Zone 2 (same intensity but fatigue from long run increases inherent RPE)
- **RPE 7:** Beginning of a tempo run - mid/high Zone 3
- **RPE 8:** Tempo run cap - end of tempo effort. Early repeats before fatigue builds
- **RPE 9:** Reps later in a repeat session, early in a time trial
- **RPE 10:** Last bit of a time trial or race. Can't possibly push harder (should be hit sparingly)

Zone 2 Gauging

If you're experienced enough to be on this program, you likely have your go-to Z2 tracking strategy. Using it is fine. I'll still include some simple options:

1. **Heart rate** (HR) between 180-age (high end) and 180-age + 15-20 (low end).
2. Ability to **nasal breathe**
3. Ability to **carry a conversation**—say ~12-15 words without pausing for a breath or gasping for air afterward.
4. **RPE (long run**) 4.6-6 - ~4.5 to start out, up to 6 towards the end
5. **RPE (easy run)** 3.5-5 - shorter duration should make this lower RPE

*Note: if you're using HR, *don't rely on a wrist worn device*. This will result in inaccurate readings. A heart rate strap provides significantly more accuracy.

Run Pacing

The pacing prescriptions aren't suggested. They're non-negotiable. If there's one thing that can make or break you—both gains and injury-wise—it's whether you abide by the pacing prescriptions or not. This is a very common mistake among many runners, and it's better to not learn the hard way.

Great pacing is the result of 2 things:

Skill - To build skill, practice proper pacing in training and iterate run to run. Each week, aim to tighten pace gaps on repeats and be more steady with tempo work. Hill days are fantastic for pacing skill. They don't include prescribed paces, so it's on you to develop a sense of a challenging, but repeatable pace. If you don't nail paces the first few sessions, no big deal. But it should be your main focus the following session.

Discipline - Once you have the skill, pacing discipline = always running your race. Not someone else's and not your ego's race. Hold yourself accountable.

© 2026 Terminator Training Method, LLC. All rights reserved.

TRAINING MODS & ALTERNATIVES

Cross Training

Cross training enhances fitness in a less stressful manner than running. Staying available to train is the name of the game. If you're always banged up, you'll have a tough time and see disappointing results. Cross training is included regularly throughout the program. Although certain types of cross training are more run specific, unless you're an elite runner, it doesn't matter which one you choose. Pick a modality (or multiple) you enjoy/have access to.

Modality Guidelines

Non-impact - Options: bike (air/spin/erg/recumbant), row, ski, elliptical, Jacob's Ladder, Versa climber, swim.

Non/Low impact - any of above, or you can opt for an incline treadmill walk or stairmaster session.

2 Options for execution:

- **Single modality -** use the same implement throughout session (i.e. spin bike x 60 min)
- **Medley** - rotate between 2-4 modalities every 15-20 minutes (i.e. 90 min session: spin bike, row, elliptical, swapping every 15 minutes 2x thru). Ensure quick transition time so you stay aerobic.

Suggestion: While most cross training involves less skill than running, your body still needs to adapt for it. For example, you could be in great running shape but still struggle on a bike or rower, or struggle swimming if you haven't swam for a while. Sticking to the same cross training modality (or 2-3 if doing medleys) throughout each phase is best practice.

If your lower body is in pain and you feel running wouldn't be smart on any day, a cross training sub-in is the right option. If it's something other than an easy or long run (i.e. repeats/tempo), try to match the cross training modality with the run prescription using time and RPE instead of distance and pace.

Example:

Prescribed session	Cross training sub
1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then👇	(warmup same duration as 1.5 mi—~15 min) 👇
5x200m Work:Rest = 1:1 (rest activity=walk)	5x (~time it takes you to run 200m, ex. 40 sec) 1:1 work:rest
--Rest 2:00--	
4x400m Work:Rest = 1:1 (rest activity=jog)	4x (~time it takes you to run 400m) 1:1 work:rest
--Rest 3:00--	
3x200m Work:Rest = 1:2.5 (rest activity=walk)	3x (~time it takes you to run 200m) Work:Rest = 1:2.5 (rest activity=walk)

© 2026 Terminator Training Method, LLC. All rights reserved.

TRAINING MODIFICATIONS & ALTS CONTINUED

Lifts
This is not a hybrid program, but does involve lifting. It's in the program to support your running—not to make you strong and jacked AF. Interested in more strength? Consider one of our Jacked Gazelle hybrid programs. Jacked Gazelle 3.0 has the highest run volume of the three.

Will you gain strength? Possibly. If you're new to lifting (or quality programming), it's likely you'll gain some strength throughout this plan. If you're more advanced, expect to maintain strength—so long as you stick to the programming AND eat enough food/protein.

High level strength athletes aside, If you lose strength during this program, it's likely a result of insufficient lifting intensity, calories and/or protein. The volume suffices for strength maintenance.

Rucks
You'll notice an option for rucking each weekend other than long quality run weeks. If you don't have a rucking goal, disregard. If you do, you can opt to sub it in for the run that week (do not do both). How you do this is up to you, but here are some considerations:

- Following this program before hopping on our SFAS Training Program or Ruck | Run | Lift? Ruck ~2x/month (every other week)
- 6 months to 1 year from selection? Ruck 1x/month (every 3-4 weeks)
- Want mostly run gains and modest ruck maintenance? Ruck 1-2x/month
- Strong runner, weak rucker? Or simply enjoy rucking and fine with slightly less run gains? Can ruck every week it's programmed if desired.

All rucks should be walking-only. If you're within 3-4 months of SOF selection and about to start this program, I strongly consider stopping and using a selection prep program (SFAS Program or Ruck | Run | Lift).

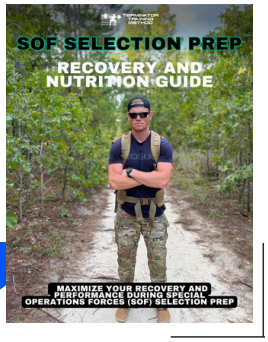

© 2026 Terminator Training Method, LLC. All rights reserved.

FUELING AND RECOVERY

Proper fueling and recovery are non-negotiable during this program. Performance decrements await if you're haphazard with things like fueling, sleep and stress management. Proper fueling and hydration—not just pre workout, but intra, too—can make or break your run performance. There is not better performance enhancer or pre-workout than:

- Pristine overall nutrition
- Perfect sleep
- Optimal pre workout hydration (electrolytes)
- Optimal pre workout nutrition
- Optimal intra workout nutrition and hydration.

Need help with all things recovery and performance-related?
The **TTM Nutrition and Recovery Guide** can show you the way.

I've also curated an Amazon list of my favorite run fuel options. Below are some of my favorites:

Gels	**Gummies**	**Liquid Carbs**
Precision 30	Clif Bloks	Tailwind*
SIS Beta Fuel	Skratch Gummies	Scratch*
Maurten 100s (25G/carb), 160s (40G/carb)	Honey stinger chews*	Vitargo
	*not to be confused with stinger waffles—too much fat = slow digestion/GI upset.	*contains electrolytes

Intake Suggestions (intra-run):

Criteria: any run lasting longer than 75 minutes

- New to fueling? Begin with ~50G/hr (a 25G gel at the 30 & 30 minute mark, work up to 90-100 over several months
- Experienced but not obsessive yet? 75G/hr (3x25G gels dispersed evenly throughout the hour)
- Advanced fueler? 100G/hr (possibly up to 120 for very long runs toward the end of the program)
- Pre time-trial, tempo or speed session? 1x25-40G bolus (gels, gummies) 10-15 minutes pre-session. Or sip on liquid concoction from ~45-10 minutes out (don't chug right before).

Hydration suggestions:

(Just like fueling, you can train yourself to intake more fluids over time)

- Newb? 12-16 Oz/water + 500MG sodium/hour
- Experienced? 16-24 Oz water + 500-750MG sodium/hour
- Advanced? 24-32 oz water + 750-1000MG sodium/hour

*Bias the higher end of the range (water + sodium) when it's hot, and vice versa. More is better, till it's not. The body can only handle so much fluid per hour. Exceeding the upper ranges will do more harm than good.

Proper intra workout fueling and hydration is commonly slept on. It's a critical error, not just for run performance, but recovery and lean muscle maintenance.

LIFT TERMINOLOGY

Lifting Terminology:

RIR = reps in reserve. # of reps before target muscle failure you stop your set. If you do 9 reps when you could've done 10, that's 1RIR. Do all 10? Zero RIR. Failed on rep 11? Trained to failure (you won't see failure prescriptions in this program).

RPE = perceived effort of the set out of 10. The program includes RPE for lower rep compound lifts. Very hard last rep, almost failed it? RPE 9-10. Very Challenging last REP? RPE 8-9. It's subjective, but still effective to keep you progressing/uninjured.

LIFT DEMO LIBRARY/ SUBSTITUTIONS

PHASE 1 LIFT SUBSTITUTIONS

- ½ Kneeling Lateral Ball Toss – Standing Lateral Ball Toss, Lateral Ball Slam
- 45° Back Raise – Barbell Rack 45° Back Raise, Hip Thrust
- 45° Side Raises – Landmine Full Contact Twist, Side Raises
- B-Stance RDL – Single-Leg RDL w/ Support (Hold onto Something for Balance)
- Bench Press – Swiss Bar Bench, Cadillac Bar Bench, Smith Machine Bench, DB Press
- Cable Lateral – DB Lateral, Machine Lateral
- Calf Raises
  - Standing Calf Raise – Leg Press Straight-Leg Calf Raise, Donkey Calf Raise
  - Seated Calf Raise – Standing Calf Raise, Donkey Calf Raise, Leg Press Calf Raise
- Chest-Supported Lateral Raise – Standing Lateral Raise
- Chin-Ups – Neutral Grip Pulldown, Rack Chins
- Cross-Bench Ab Mat Crunch – GHD Crunch, Decline Crunch
- DB Curl – EZ Bar Curl, Cable Curl
- DB Skull Crusher – EZ Bar Skull Crusher, JM Press, Cable Skull Crusher
- Deficit Push-Up – DB Press, Machine Press w/ Full ROM
- Dips – Machine Dips, Slight Decline Press, Machine Decline Press
- Hex Bar Deadlift – BB Deadlift, Hex Bar RDL, Stiff-Leg Deadlift
- High-Incline DB Press – High-Incline Smith Machine Press, High-Incline KB Press
- Hurdle Jumps – Air Hurdle (No Bar)
- Jump Push-Ups – Med Ball Chest Pass, Smith Machine Bar Throw & Catch
- Leg Extension – Extra ROM Leg Extension, Sissy Squat
- Pogo Hops – Jump Rope
- Rack Chins – Chin-Ups, Pull-Ups, Pulldowns
- Seated Calf Raise – Standing or straight leg calf raise
- Seated Leg Curl – Lying Leg Curl, Standing Leg Curl, Glute-Ham Raise
- Seated Vertical Jump – Seated Box Jump, Free-Standing Vertical Jump
- Single-Leg Pogos – Jump Rope

LIFT TERMINOLOGY AND SUBSTITUTIONS

- Spider Curl – Concentration Curl, Preacher Curl (Steep Bench)
- Squat (each squat day will have 3 options)
  - Barbell - SSB, Other Specialty Bar
  - SSB - Barbell, Other Specialty Bar
  - Belt Squat- Leg Press, Hack Squat, Pendulum Squat
- Tib Raise – KB Tib Raise, Bodyweight Tib Raise
- Tricep X Pushdown – Single Cable Pushdown w/ Rope or Bar
- Upper Back Row – Dumbbell (Sub w/ Machine if Desired)
- Walking Lunge – Reverse Lunge, Split Squat

PHASE 2 LIFT SUBSTITUTIONS

- 45° back raise – glute ham raise, reverse hyper extension
- Bumper Plate Jump Push-Up – Box Jumping Push-Up, Med Ball Chest Pass
- Cable Y Raise – Cable Lateral Raise, DB Lateral Raise
- Close-Grip Push-Up – Close-Grip Smith Machine Press, Close-Grip BB Bench Press
- Deficit Push-Up w/ Partials – Light DB Presses w/ Partials
- Drop Step Box Jumps – Drop Step Vertical Jumps
- Face Pull – Band Pull-Apart, Banded Face Pull
- Glute-Ham Raise – Any Leg Curl Variant
- High-Incline Smith Machine Press – High-Incline DB Press, or KB Press, Machine Press
- Hip Thrust – 45° Back Raise
- Incline Bench Reverse Crunch – Decline Crunch, Roman Chair Raise, Hanging Leg Raise
- Lat Pulldown – Pull-Up, Chin-Up, Rack Chin
- Low-Incline DB Press – Low-Incline Machine Press, Low-Incline Smith Machine Press
- Machine Chest Press – DB Press, BB Press, Specialty Bar Press
- Pogos w/ Integrated High Hops – Jump Rope w/ Integrated Double Under
- Preacher Curl – Spider Curl, Arms-in-Front Curl
- RDL – Any RDL Variation (DB, BB, or Hex Bar), a Good Morning, or a 45° Back Raise
- Reverse Nordic – Sissy Squat
- Rope Hammer Curl – DB Hammer Curl, Neutral-Grip Bar Curl
- Seated Box Jumps – Seated Vertical Jumps, Standing Box Jumps
- Standing Lateral Med Ball Toss – ½ Kneeling Lateral Med Ball Toss
- Suitcase Carry – bumper plate suitcase carry
- Tricep Pushdown – N/A
- Xtra ROM Leg Extension – Leg Extension, Sissy Squat
- Xtra ROM Row – Standard Cable Row, Extra ROM DB or BB Row (Add Jefferson Curl–Like Motion)

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 1 | WEEK 1

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Speed Work (2 mi)*	**None**	**Speed Work (2 Mi/5K bias)** 1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) pt 1: 6x200m Work:Rest= 1:1 (rest activity:walk) --Rest 2:00-- pt 2: 4x400m Work:Rest= 1:1 (rest activity:jog) --Rest 3:00-- pt. 3: 3x200m Work:Rest=1:2.5 (rest activity:walk) 1 mi easy cooldown jog	**Speed Work Pacing:** Don't know your 2-mile time? See page 10. If you DO know it, 👇 Pt 1: 18-22 sec/mi faster than current 2-mi pace Pt 2: 12-15 sec/mi faster than current 2-mi pace Pt 3: 2-4 sec**/200** faster than initial 200s or fastest repeatable All rest between parts (--Rest 2:00--) = stand or move around lightly **Notes:** if you're a *Stronger runner (<12:30 2 mi), lean towards the low end of the pace range (i.e 18-19 secs for pt 1, 12-13 secs for pt 2, etc) *Average runner (12:30-13:30), middle of gap *Weaker runner (13:30-14:30), high side **If slower than 14:30, consider 2&5 mi program ---(duration)---= the time you'll rest between parts (i.e. 2:00 after 6th 200, pre 1st 400. 3:00 between 4th 400 and 1st 200 of pt 3) *Uniform throughout program* **Work: Rest =** For part 1 and part 2, rest is = to duration (if 200 took 45 secs, rest 45 secs) Part 3: can pre-enter rest period based on predicted times (i.e. think it'll take 40 secs? Rest 2.5x that. So 100 sec or 1:40) See more detailed explanation of work:rest + pro tips on p. 11-12.
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Push + Quad + Easy Run*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Single leg pogos 3x :20 ea 1b) Jump Pushups 3x5 **Lower Legs** 1a) Standing/straight leg calf raise 2x8-10 | 1 RIR 1b) Tib raises 2x8-12 | 1 RIR **Lifts** 1) BB or Swiss Flat Press 3x6-8 | 1-2 RIR 2) High Incline DB Press 2x5-7 | 1-2 RIR 3) Walking lunge 2x8-10/leg | 1-2 RIR 4a) Tricep X pushdown 3x8-10 | 0-1 RIR 4b) Cable Lateral raise 3x8-10 | 0-1 RIR	**Cross Training** 30 minute easy z1/low z2 Cross-training modality of choice	**Jumps** Rest as needed btwn 1a & 1b, 60-90 sec btwn sets (acceptable to do light shoulder/hip/ankle mobility during rest) **Lower legs** RIR 1 for all lower leg work throughout program (RIR explanation on p. 18) Rest ~30 sec btwn 1a/b, 45-60 sec btwn sets Best option for calf raise: non-spinal loaded (i.e leg press or donkey calf raise). Smith machine or calf raise machine acceptable **Lifts** *All RIRs constant throughout phase 1* - Compound lifts (1, 2, 3): Rest 2-3 min btwn sets - Bench: swiss or cadillac bar optional (better on shoulders) - High incline DB Press: ~75°, not vertical - Lunge: suggest using straps/grips if using DBs - Isolation lifts (4a/b) Rest as needed between a/b, rest 1 min btwn sets **Conditioning** Suggested: non-impact options — bike (air/spin/erg/recumbant), row, ski,
	Weight Training	**Conditioning**	**Notes**
DAY 3 FOCUS *Easy Run*	**None**	**Easy Run** 5mile /45-50 minute easy run	**Easy Run** Low-mid Z2 Flirting w/ Z3 not suggested (no additional benefit, just fatigue/worse results) Consider doing on non-paved surface (applies throughout program)
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Fartlek*	**None**	**Warmup** 1.5 mile easy jog warmup 3-4x 0:20 strides **Fartlek** 4x8:00 rd (32:00 run total) Each rd: 2:00 @ +10-15 sec/mi slower than 5-mi pace 1:00 light jog RPE 2-3 1:30 @ current 5-mi pace 1:00 light jog RPE 2 1:00 @ current 2-mi pace 1:30 recovery jog 1.5 mile easy jog cooldown	**Notes** Allow HR to drop back down into Z1 (not resting) post warmup/strides See p. 7 if not familiar with Fartlek runs. Must know 2-mi pace and 5-mi pace. **Pacing Example** Hypothetical 5 mile: 35:00 or 7:00/mi Hypothetical 2 mile: 13:00 or 6:30/mi Each round hypothetical pacing: 2:00 at 7:10-7:15 1:00 easy (no need to track pace—'easy') 1:30 at 7:00/mi 1:00 easy (no need to track pace—'easy') 1:00 at 6:30/mi 1:30 easy Repeat x 4 total rounds.
	Weight Training	**Conditioning**	**1:00 easy (no need to track pace—'easy')**
DAY 5 FOCUS *Pull + hinge*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Hurdle jumps 3x4 1b) 1/2 kneel lateral med ball toss 3x3 ea **Lower Legs** 1a) Seated/bent leg calf raise 2x6-8 1b) Tib raises 2x8-12 **Main Lifts** 1) Upper back row 3x8-10 | 0-1 RIR 2) Chin ups 3x4-6 | 1-2 RIR 3) 45° back raise 2x10-12 | 0-1 RIR 4a) Spider Curl 2x8-10 | 0-1RIR 4b) Rear delt fly 2x8-10 | 0-1RIR 4c) cross bench ab mat crunch 2xmax	**None**	**Jumps** Rest 60 sec btwn 1a), 1b) & 60-90 sec btwn sets (acceptable to do light shoulder/hip/ankle mobility during rest) **Lower legs** Rest ~30 sec btwn 1a & 1b, 45-60 sec btwn sets Calves tempo: Up fast, no time at top, lower over 3-4 sec, Pause x3-4 sec at bottom (every rep) Tibs: Pause 2-3 sec at bottom every rep **Lifts** 1-3: Rest 2-3 min btwn sets Upper back row: machine, DB or T-bar Row: choose based on avaialable equip/preference Chins: load accordingly. Suggest neutral grip or angles 90s/rings 45* back raise: glute/ham bias (don't hyperextend back) Isolation lifts: Rest as needed between 4a/b/c, 1 min btwn sets *RIR constant throughout phase*
	Weight Training	**Conditioning**	**Notes**
DAY 6 FOCUS *Long Run*	**None**	**Long Run** 10 miles, Z2 OR **Ruck** 5-7 mi, walk only	**Long run** Staying in Z2 (mid/high) is strongly suggested **Ruck** If you have a ruck goal you're welcome to ruck Suggested: 45-50#
	Weight Training	**Conditioning**	**Notes**
DAY 7 Rest Day	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 1 | WEEK 2

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Power + PT + lower leg + Ez Run*	**Prep** 1a) Medball chest pass 3x3 1b) Rower pulls 3x5 for max wattage 1c) Overhead carry 3x30 yd **Main Lift** Hex Bar DL 3x4-6 | RPE 8 **Cals (# in perenthesis = seconds rest)** 3 sets Pushup or HRPU 60 sec (90 rest) | 45 sec (75 rest) | 30 sec Pull up: 3 sets 1-2RIR (rest 2-3 min) Plank: Set 1: Max duration, rest 1:30 | Set 2: hold x 80% of set 1 **Lower Legs**	**Easy Run** 5 mile/45-50 minute easy run (Z2)	**Suggested: split into 2 sessions** **Prep** Rest 60 sec between 1a/b, as needed between b/c **Main Lift** This is optional for those w/ upcoming PT assessments (open to all if interested) Rest 2-4 min btwn sets Suggest not using straps (chalk ok) **Cals** Practice test day pacing/execution Plank can be omitted if confident with it **Lower leg** Rest ~30 sec btwn 1a/b, 45-60 sec btwn sets Same tempo as last week **Run** Choose either duration or mileage. More about choosing milage or duration on p. 11.
DAY 2 FOCUS *Speed Work (5 mi)*	**None**	**Speed Work (5 Mi/10K Bias)** 1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) Pt 1: 2x1K Work:Rest: 1:.5 (rest activity: jog) --- Rest 4:00 --- Pt 2: 2x1K Work:Rest: 1:.5 (rest activity: walk) 1.5 mi easy cooldown jog	1K = 1000 meters / 2.5 laps on standard track Pacing: Goal 5 mi pace/negative split (guide 👇) *Strong runner (<33:00): 5-10 sec/mi faster than current *Avg runner (33:00-37:00): 8-12 sec/mi faster than current 5 mi *Weaker runner (37:00-40:00): 10-15 sec/mi faster than current 5 mi >40:00? Consider 2&5 mi first Note: If you can't maintain pace w/ given rest, goal pace is too lofty (Don't extend rest periods. Go slower on work periods) Goal: Negative split = slightly faster with each repeat Should be an 8-9 RPE workout Pacing ex. If you're an avg runner and ran a 35:00 5 mi (7/mi), goal: 6:50-6:53 pace Pacing/rest example If your 1K takes you 4:00, rest = jog x 2 min (suggest calculating/pre-setting watch pre-session based on projected time)
DAY 3 FOCUS *Rest*	**None**	**None**	Rest Day
DAY 4 FOCUS *Legs + Short Sprint*	**Prep** Lower Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Seated vertical jumps 3x3 1b) Pogo hops 3x30 sec **Lifts** 1) Seated leg curl 3x8-12 | 0-1 RIR 2) Squat 3x5-7 | 2-3 RIR freeweight, 1-2 RIR belt 3) B-stance RDL 2x6-8 | 1-2 RIR 4a) Leg extension 2x8-12 | 0-1 RIR 4b) 45° side raises | 1-2 RIR	**Airbike Sprints** 5-7 min EZ pedal warmup 6x8 sec max effort airbike sprint | RPE 10 Rest: full rest x 1 min, easy pedal x 30 sec into next sprint 5-7 min easy pedal cooldown	**Jumps** Rest 90 sec btwn a/b **Lifts** - Rest 2-3 min btwn set on lifts 1&2, - Rest 90 sec btwn legs AND sets for lift 3 - Leg curl: 1st 2 sets normal, last set leaned forward - Squat: Choose choose most comfortable option btwn belt/BB or SSB. *other machine squat acceptable (leg press, hack, pendulum) - Rest as needed between 4a/b, 60-90 sec btwn sets - B-stance: ensure you're resting btwn legs (no need? not training hard enough) - Leg ext: consider extra ROM w/ yoga blocks (demo in intro) - Side raise: focus on big stretch, load if needed **All RIRs constant throughout phase** **Bike sprints** These are not cardio. Speed/fast twitch development If anything, longer rest > shorter so you're fresh for all
DAY 5 FOCUS *Upper + Eeasy Run*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Main Lifts** 1) Dips 2x4-6, 1x BW | Set 1&2: 1-2 RIR 2) Chest suppt row (any) 3x8-10 | 0-1 RIR 3a) Rack chins 2x5-7, 1x BW; Set 1&2: 1-2 RIR | Set 3: 1-2RIR 3b) Deficit pushup 3x | 1-2 RIR **ArmFarm** 1a) DB skull crusher 2x8-10 | 1-2 RIR 1b) Chest suppt. DB lateral raise 2x10-12 | 0-1 RIR 1c) DB curl 2x8-10 | 0-1 RIR	**Suggested: split into 2 sessions** **Easy Run** 6 mi/60 min easy run (Z2) + 4x:20 strides on slight incline	**Prep** (See p. 9 for lifting warmups) **Main Lifts** *All RIRs constant throughout phase* - Rest 2-3 min btwn sets on 1 & 2 - Rest 60-90 sec btwn 3a)/3b), 60-90 sec btwn sets - Dips: can load w/ straight weight or chain - Rows: upper back version - Rack chins: load lap w/ medball, plate or DB for 1st 2 rds - Def pushup: actually use deficit **ArmFarm** Rest as needed between lifts/sets (constant RIR throughout phase) **Run** Choose milage or duration. Low Z2; Incline ~2-4% for strides
DAY 6 FOCUS *Long*	**None**	**Long Run** 11 miles, Z2 **Or** **Ruck** 6-8 mi, walking only	**Long run** Staying in Z2 (mid/high) is strongly suggested **Ruck** If you have a ruck goal you're welcome to ruck Suggested: 45-50# Rucked last week? Add 1 mi. Didn't? start low end of range
DAY 7 REST	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 1 | WEEK 3

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Speed Work (2 mi)*	**None**	**Speed Work (2 Mi/5K bias)** 1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) pt. 1: 6x200m Work:Rest: 1:1 (rest activity: jog) --Rest 2:00-- pt. 2: 5x400m Work:Rest: 1:.75 (rest activity: jog 1st 3, walk last 2) --Rest 4:00-- pt. 3: 1x800m 1.5-2 mi easy cooldown jog	Only annotating changes from wk 1 👇 **Pacing:** Pt 1: match/1-2 sec/200 faster than wk 1 Pt 2: match/1-3 sec faster/400 than wk 1 Pt 3: 6-8 sec/mi faster than current 2 mi pace *Strong runner 4-6 sec/mi Note slightly longer cooldown

	Weight Training	Conditioning	Notes
DAY 2 FOCUS *Push + Quad + Cross Training*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Single leg pogos 3x :20 ea 1b) Jump Pushups 3x5 **Lower Legs** 1a) Standing/straight leg calf raise 2x8-10 1b) Tib raises 2x8-12 **Lifts** 1) BB or Swiss Flat Press 3x6-8 | 1-2 RIR 2) High Incline DB Press 2x5-7 | 1-2 RIR 3) Walking lunge 2x8-10/leg | 1-2 RIR 4a) Tricep X pushdown 3x8-10 | 0-1 RIR 4b) Cable Lateral raise 3x8-10 | 0-1 RIR	**Cross Training** 50 minute easy z1/low z2 Cross-training modality of choice	**Strength:** see wk 1 for lift to lift details Rest periods included below **Jumps** Rest as needed btwn 1a & 1b, 60-90 sec btwn sets (acceptable to do light shoulder/hip/ankle mobility during rest) **Lower legs** Rest ~30 sec btwn 1a/b, 45-60 sec btwn sets **Lifts** Rest 2-3 min btwn sets Isolation lifts (4a/b) rest 30 sec btwn a/b, 45-90 btwn sets **Conditioning** Non-impact options — bike (air/spin/erg/recumbant), row, ski, elliptical, Jacob's Ladder, Versa climber, swim. Cross training notes on p. 15. Suggested: use same machine as wk 1 so you're well adapted/not a newb every time

	Weight Training	Conditioning	Notes
DAY 3 FOCUS *Easy Run*	**None**	**Easy Run** 5mi/45-50 minute easy run	**Easy Run** Choose milage or duration. Low-mid Z2

	Weight Training	Conditioning	Notes
DAY 4 FOCUS *Tempo + Pace Work*	**None**	**Warmup** 2 mile light jog warmup 3-4 x :20 strides **Tempo** 3 miles @ tempo (see notes) 1:00 walk, 1:00 light recovery jog into 3x .5 mile bouts | jog for 75 sec btwn 1st&2nd, walk 75 sec btwn 2&3 (see notes for pacing) 2 mile cooldown	Tempo #1 Stick to pacing recs **3 Mi Tempo:** 12-18 sec/mi slower than current 5 mi **.5 mi segments:** Bout 1&2: current 5 mi pace Bout 3: goal 5 mi pace (see goal pace recs on wk 2 day 2 speed work)

	Weight Training	Conditioning	Notes
DAY 5 FOCUS *Pull + hinge*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Hurdle jumps 3x4 1b) 1/2 kneel lateral med ball toss 3x3 ea **Lower Legs** 1a) Seated/bent leg calf raise 2x6-8 | 1 RIR 1b) Tib raises 2x8-12 | 1 RIR **Main Lifts** 1) Upper back row 3x8-10 | 0-1 RIR 2) Chin ups 3x4-6 | 0-1 RIR 3) 45° back raise 2x10-12 | 0-1 RIR 4a) Spider Curl 2x8-10 | 0-1RIR 4b) Rear delt fly 2x8-10 | 0-1RIR 4c) Cross bench ab mat crunch 2xmax	**None**	**Strength:** same lift details as week 1 **Rest periods included below** **Jumps** Rest 60 sec btwn 1a), 1b) & 60-90 sec btwn sets **Lower legs** Rest ~30 sec btwn 2a & 2b, 45-60 sec btwn sets **Lifts** Upper back row: use machine, DB or T-bar 1-3: Rest 2-3 min btwn sets Rest as needed between 4a/b/c, rest 1 min btwn sets

	Weight Training	Conditioning	Notes
DAY 6 FOCUS *Long*	**None**	**Long Run** 12 miles, Z2 **Or** **Ruck** 7-9 mi, walking only	**Long run** Staying in Z2 (mid/high) is strongly suggested **Ruck** If you have a ruck goal you're welcome to ruck Suggested: 45-50# Rucked last week or wk 1? Add 1 mi. 1st ruck yet? 6 mi

	Weight Training	Conditioning	Notes
DAY 7 REST	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 1 | WEEK 4

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Power + PT + lower leg + Ez Run*	**Prep** 1a) Medball chest pass 3x3 1b) Rower pulls 3x5 for max wattage 1c) Overhead carry 3x30 yd **Main Lift** Hex Bar DL 3x4-6 | RPE 8.5 **Cals (# in perenthesis = seconds rest)** Pushup or HRPU 60 sec (90 sec rest) | 60 sec (90 sec rest) | 45 sec Pull up 3x 1-2RIR (rest 2-3 min) Plank (optional): Set 1: Max duration, rest 1:30 | Set 2: hold x 80% of set 1 **Lower Legs** 1a) Seated Calf raise 2x5-7 | 1 RIR 1b) Tib raise 2x10-12 | 1 RIR	**Suggested: split into 2 sessions** **Easy Run** 6 mile/60 minute easy run	See week 2 for lift details Rest Periods included below **Prep** rest 60 sec between 1a/b, as needed between b/c **Main Lift** Hit 6 last time? Add ~10# Hit less than 6?: keep load same till hitting 6 DO NOT FORCE it. If fatigued, dial it back **Cals** no change to instructions from wk 2 **Lower leg** rest as needed between a/b, 60-90 sec btwn sets **Run** Choose milage or duration. Low/mid Z2
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Speed Work (5 mi)*	**None**	**Speed Work (5 Mi/10K Bias)** 1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) Pt 1: 3x1K Work:Rest: 1:.5 (rest activity: walk) ---rest 3:00--- Pt 2: 5x400m Work:Rest: 1:.25 (rest activity: jog) 1.5 mi easy cooldown jog	1K = 1000 meters / 2.5 laps on standard track **Pacing:** 1K: Match wk 2 paces +/- 3-5 sec/mi Same instructions on pacing vs. rest Should be an 8-9 RPE workout 400s: match/2-4 sec/mi faster than 1Ks (note short rest) Pacing/rest example If your 1K takes you 4:00, rest = jog x 2 min If your 400 takes 1:30 (90 sec), jog 25 secs for recovery (round up) (suggest calculating/pre-setting watch pre-session based on projected time)
	Weight Training	**Conditioning**	**Notes**
DAY 3 FOCUS *Rest*	**None**	**None**	Rest Day
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Legs + Hill Sprints*	**Prep** Lower Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Seated vertical jumps 3x3 1b) Pogo hops 3x30 sec **Lifts** 1) Seated leg curl 3x8-12 | 0-1 RIR 2) Squat 3x5-7 | | 2-3 RIR freeweight, 1-2 RIR belt 3) B-stance RDL 2x6-8 | 1-2 RIR 4a) Leg extension 2x8-12 | 0-1 RIR 4b) 45° side raises | 1-2 RIR	**Best option: split lift/run into 2 sessions** Acceptable: lift, then run (add intra-workout fuel/hydration) **Hill Sprints** 1.5 mi/14-16 min easy jog warmup **Hill Sprint Warmup** (see notes) **Session:** On as steep a hill as possible 3x10 sec sprint w/ ramping RPE 6-7, 7-8, 8-9 (rest 1 min) 6x10 sec max effort hill sprint | RPE 10 Rest: full rest x 2 min 2 mi/18-20 min easy jog cooldown	**Jumps** Rest 90 sec btwn a/b **Lifts:** same details as week 1 - Rest 2-3 min btwn set on lifts 1&2 | Rest 90 sec btwn legs AND sets for lift 3 - Leg curl: 1st 2 sets normal, last set leaned forward - Squat: Choose btwn belt/BB or SSB. *other machine squat acceptable - B-stance: ensure you're resting btwn legs (no need? not training hard enough) - Leg ext: consider extra ROM w/ yoga blocks (demo in intro) **Hill Sprint Warmup -** detailed w/u on p. 13 or follow 2-3 sets of (in succession): Butt kicks x 25 yd High knees x 25 yd Lateral leg swings x 10-12 ea Pogo hops x 20-30 sec Skips for height x 4-5 skips/leg **Hill Sprints** These are not cardio. Speed/fast twitch development If anything, longer rest > shorter so you're fresh for all **Warmup/cooldown** = high Z1/low Z2
	Weight Training	**Conditioning**	**Notes**
DAY 5 FOCUS *Upper + Easy Run*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Main Lifts** 1) Dips 2x4-6, 1x BW 2) Chest suppt row (any) 3x8-10 | 0-1 RIR 3a) Rack chins 2x5-7, 1x BW; Set 1&2: 1-2 RIR | Set 3: 1-2RIR 3b) Deficit pushup 3x 1-2 RIR **ArmFarm** 1a) DB skull crusher 2x8-10 | 1-2 RIR 1b) Chest suppt. DB lateral raise 2x10-12 | 0-1 RIR 1c) DB curl 2x8-10 | 0-1 RIR	**Suggested: split into 2 sessions** **Easy Run** 5K/30 min easy run	**Main Lifts** *Same instructios as week 2* Rest 2-3 min btwn sets on 1 & 2 Rest 60-90 sec btwn 3a)/3b), 60-90 sec btwn sets Rack chins: load lap w/ medball, plate or DB for 1st 2 rds **ArmFarm** Rest as needed between lifts/sets **Run** Choose milage or duration. High Z1/low Z2 -- quality run tomorrow
	Weight Training	**Conditioning**	**Notes**
DAY 6 FOCUS *Long Qual Run*	**None**	**Long Run W/ Quality** 12 mile run Mi 1-2 easyZ1/Z2 Mi 3-4 current 5 mi pace Mi 4-4.25 goal 5 mi pace Mi 4.25-6 light recovery pace back to Z2 Mi 6-6.5 current 5 mi pace Mi 6.5 - 8 light recovery pace back to Z2 Mi 8-9.5 tempo effort (RPE 7.5) Mi 9.5-12 Z2	**Long run** 1st Quality long run Stick to pacing as best you can Session should be a 7-8 RPE overall vs. a usual long run at 5-6 RPE Goal: each recovery bout, run easy enough to get back to Z2
	Weight Training	**Conditioning**	**Notes**
DAY 7 REST	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 1 | WEEK 5

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Easy + Strides* Or Cross Training	**None**	**Easy Run** 5 mi/50 min easy run + 5x:30 strides on slight incline **Or** **Non-Impact** 50-60 min Z2 Xtrain	**Light Week for running (no speed session—tempo/hills later in wk)** **Feeling good (joints) from weekend?** Opt for run 2-4% incline for strides **Feeling questionable/bad?** Cross Training. Non-impact options — bike (air/spin/erg/recumbant), row, ski, elliptical, Jacob's Ladder, Versa climber, swim.
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Push + Quad +* *Cross Training*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Single leg pogos 3x :20 ea 1b) Jump Pushups 3x5 **Lower Legs** 1a) Standing/straight leg calf raise 2x8-10 1b) Tib raises 2x8-12 **Lifts** 1) BB or Swiss Flat Press 3x6-8 | 1-2 RIR 2) High Incline DB Press 2x5-7 | 1-2 RIR 3) Walking lunge 2x8-10/leg | 1-2 RIR 4a) Tricep X pushdown 3x8-10 | 0-1 RIR 4b) Cable Lateral raise 3x8-10 | 0-1 RIR	**Cross Training** 60 minute easy z1/low z2 Cross-training modality of choice	Rest periods included below **Jumps** Rest as needed btwn 1a & 1b, 60-90 sec btwn sets **Lower legs** Rest ~30 sec btwn 2a & 2b, 45-60 sec btwn sets **Lifts** Same lift details as week 1 Compound lifts (1, 2, 3): Rest 2-3 min btwn sets | Isolation lifts rest 30 sec btwn 4a/b, 45-90 btwn sets **Conditioning** Suggested: non-impact (same machine as wk 1&3) Optional (joints feeling stellar): incline treadmill walk or stairs
	Weight Training	**Conditioning**	**Notes**
DAY 3 FOCUS *Easy Run*	**None**	**Easy Run** 6mi/60 minute easy run	**Easy Run** Choose milage or duration. Low-mid Z2
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Tempo + Hills*	**None**	**Tempo + Hill Repeats** 1.5 mile light jog warmup 3-4 x :20 strides pt 1: 4 miles @ tempo ---Rest: 3:00 (jog 1:30, walk 1:30 into hill #1)--- pt 2: 4x30 sec hill repeats | Reps 1-3 = REP 8 | Rep 4 = RPE 9 | 75-90 sec rest btwn bouts ---rest 2:00 (walk all)--- pt 3: 2x30 sec downhill repeats @ RPE 8 rest = walk back up/75-90 sec 1.5 mile cooldown	**Tempo** Stick to pacing recs **Part 1 (4 Mi Tempo):** match +/- 5 sec/mi from wk 3 **Part 2&3:** Repeatable, hard but not break-neck pace Negative split = goal (slightly further w/ each :30 rd) Less steep than hill sprints: 2-4% incline Controlled downhill repeats -- not full sprint. These are speed enhancing but damaging, so be mindful
	Weight Training	**Conditioning**	**Notes**
DAY 5 FOCUS *Pull + Hinge*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Hurdle jumps 3x4 1b) 1/2 kneel lateral med ball toss 3x3 ea **Lower Legs** 1a) Seated/bent leg calf raise 2x6-8 | 1 RIR 1b) Tib raises 2x8-12 | 1 RIR **Main Lifts** 1) Upper back row 3x8-10 | 0-1 RIR 2) Chin ups 3x4-6 | 0-1 RIR 3) 45° back raise 2x10-12 | 0-1 RIR 4a) Spider Curl 2x8-10 | 0-1 RIR 4b) Rear delt fly 2x8-10 | 0-1 RIR 4c) Cross bench ab mat crunch 2xmax	**None**	**Jumps** Rest 60 sec btwn 1a), 1b) & 60-90 sec btwn sets **Lower legs** Rest ~30 sec btwn 1a/b, 45-60 sec btwn sets **Lifts** 1-3: Rest 2-3 min btwn sets Upper Back Row: machine, DB or T-bar Rest as needed between 4a/b/c, rest 1 min btwn sets
	Weight Training	**Conditioning**	**Notes**
DAY 6 FOCUS *Long (deload)*	**None**	**Long Run (dial-back)** 8 miles, Z2 **Or** Non/low impact sub x 80-90 minutes **OR** **Ruck** 4-6 mi, walk only	**Dial back long dist. day** Low-mid Z2 for all Back to high intensity next week Opt for whichever one will make you most prepared Ruck only if you've rucked at least 1x in phase 1 40-50#
	Weight Training	**Conditioning**	**Notes**
DAY 7 REST	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 1 | WEEK 6

	Weight Training	Conditioning	Notes
DAY 1 FOCUS Power + PT + lower leg + Ez Run	**Prep** 1a) Medball chest pass 3x3 1b) Rower pulls 3x5 for max wattage 1c) Overhead carry 3x30 yd **Main Lift** Hex Bar DL 3x4-6 | RPE 9 **Cals** Pushup or HRPU 75 sec (90 secs rest) | 60 sec (20 sec rest) | Max reps Pull up 3x 1-2RIR (rest 2-3 min) Plank (optional): 4:00 density set **Lower Legs** 1a) Seated Calf raise 3x5-7 | 1 RIR 1b) Tib raise 3x10-12 | 1 RIR	**Suggested: split into 2 sessions** **Easy Run** 10K (6.2 mile)/60 minute easy run	**Prep** Rest 60 sec between 1a/b, as needed between b/c **Main Lift** Hit 6 last time? Add ~10# Hit less than 6?: keep load same till hitting 6 DO NOT FORCE it. If fatigued, dial it back **Cals** Short rest before 3rd set to practice pumping more rep under fatigue Shouldn't get a ton of reps in set 3 Plank: density set = accumulate 4 min total, resting as needed (if you get it all in one go, can stop or keep going) **Lower leg** +1 set each**.** Rest as needed between a/b, 60-90 sec btwn sets. **Run** choose either duration or mileage Low/mid Z2

	Weight Training	Conditioning	Notes
DAY 2 FOCUS *Speed Work (5 mi)*	**None**	**Speed Work (5 Mi/10K Bias)** 1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) pt 1: 4x1K Work:Rest: 1:.5 (rest activity: 1/2 jog, 1/2 walk) ---rest 3:00 --- pt 2: 3x400m Work:Rest: 1:1.25 (rest activity: walk) 1.5 mi easy cooldown jog	**Pacing:** 1Ks: Aim to match wk 4 1k repeats +/- 3 sec/mi 400s: 8-10 sec faster on avg than wk 4 400s (longer rest today) **Pacing/rest example** If your 1K takes you 4:00, rest = jog/walk for 2 min (alt. jog/walk every ~30 sec) 400s: If you ran 1:30s in wk 4, aim for 1:20-1:22 this week 400s rest: rest if you ran 1:30s (90 sec), rest (walk) = ~112 sec (90x1.25 - can round)

	Weight Training	Conditioning	Notes
DAY 3 FOCUS *Rest*	**None**	**None**	Rest Day

	Weight Training	Conditioning	Notes
DAY 4 FOCUS *Legs + Hill Sprints*	**Prep** Lower Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Seated vertical jumps 3x3 1b) Pogo hops 3x30 sec **Lifts** 1) Seated leg curl 3x8-12 | 0-1 RIR 2) Squat 3x5-7 | 2-3 RIR freeweight, 1-2 RIR belt 3) B-stance RDL 2x6-8 | 1-2 RIR 4a) Leg extension 2x8-12 | 0-1 RIR 4b) 45° side raises | 1-2 RIR	**Hill Sprints** 2 mi/18-20 min easy jog warmup **Hill Sprint Warmup** (see p. 13) **Session:** On as steep a hill as possible 3x10 sec sprint w/ ramping RPE 6-7, 7-8, 8-9 (rest 1 min) 8x10 sec max effort hill sprint | RPE 10 Rest: full rest x 2 min 1.5-2 mi/15-20 min easy jog cooldown 2mi/18-20 min easy jog cooldown	**Best option:** split lift/run into 2 sessions Acceptable: lift, then run (add intra-workout fuel/hydration) **Jumps** **Rest 90 sec btwn a/b** **Lifts:** Same lift details as week 2. Rest Periods included below: Rest 2-3 min btwn set on lifts 1&2 | Rest 90 sec btwn legs AND sets for lift 3 Rest as needed between 4a/b, 60-90 sec btwn sets **Hill Sprints** These are not cardio. Speed/fast twitch development. If anything, longer rest > shorter so you're fresh for all. P. 13 contains warmup details. **Warmup/cooldown** = high Z1/low Z2

	Weight Training	Conditioning	Notes
DAY 5 FOCUS *Upper + Easy Run*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Main Lifts** 1) Dips 2x4-6, 1x BW 2) Chest suppt row (any) 3x8-10 | 0-1 RIR 3a) Rack chins 2x5-7, 1x BW; Set 1&2: 1-2 RIR | Set 3: 1-2RIR 3b) Deficit pushup 3x 1-2 RIR **ArmFarm** 1a) DB skull crusher 2x8-10 | 1-2 RIR 1b) Chest suppt. DB lateral raise 2x10-12 | 0-1 RIR 1c) DB curl 2x8-10 | 0-1 RIR	**Suggested:** split into 2 sessions **Easy Run** 4 mi/40 min easy run	**Main Lifts** Same instructions as week 2 Rest 2-3 min btwn sets on 1 & 2 Rest 60-90 sec btwn 3a)/3b), 60-90 sec btwn sets Rack chins: load lap w/ medball, plate or DB for 1st 2 rds **ArmFarm** Rest as needed between lifts/sets **Run** Choose milage or duration. High Z1/low Z2 -- quality tomorrow

	Weight Training	Conditioning	Notes
DAY 6 FOCUS *Long Qual Run*	**None**	**Quality Long Run W/ Strong Finish** 13 mile run Mi 1-10.5 easy/Z2 Every .5 mi from mi 10.5-12 10.5-11 RPE 6-7 11-11.5 RPE 7-7.5 11.5-12 RPE 7.5-8 Last mile = easy/cooldown **Or** Ruck 8-10 mi, walk only	**Long run** 2nd Quality long run normal mid-high Z2 miles 1-10.5 Follow gradual RPE increase mi 10.5-12 Very easy final mile **Ruck** If you have a ruck goal you're welcome to ruck Suggested: 45-50# Rucked wk 3? Add 1 mi. Didn't? start w/ 6-7 mi

	Weight Training	Conditioning	Notes
DAY 7 REST	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 1 | WEEK 7

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Speed Work (2 mi)*	**None**	**Speed Work** 2 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 3 rounds of 5x400m (15x400 total) Work:Rest rd 1 & 2 = 1:.75 (rest activity: walk) rd 3= 1:1 (rest activity: walk) --Rest 3:00 btwn rd 1&2, 4:00 btwn rd 2&3-- 1.5-2 mi easy cooldown jog	**Pacing:** Rd. 1: 10-15 sec/mi faster than current 2mi --full rest 3:00-- Rd. 2: match/beat avg. rd 1 pace by 1-2 sec/400 --full rest 4:00--- Rd. 3: ± 1-2 sec/400 from rd 2 * besides run gains the magic in this session is pacing discipline Ideally, You'll run ~ this pace next wk's 2 mi
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Push + Quad + Cross Training*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Single leg pogos 3x :20 ea 1b) Jump Pushups 3x5 **Lower Legs** 1a) Standing/straight leg calf raise 2x8-10 | 1 RIR 1b) Tib raises 2x8-12 | 1 RIR **Lifts** 1) BB or Swiss Flat Press 3x6-8 | 1-2 RIR 2) High Incline DB Press 2x5-7 | 1-2 RIR 3) Walking lunge 2x8-10/leg | 1-2 RIR 4a) Tricep X pushdown 3x8-10 | 0-1 RIR 4b) Cable Lateral raise 3x8-10 | 0-1 RIR	**Cross Training** 75 minute easy z1/low z2 Cross-training modality of choice	**Strength**: Same lift details as week 1 Rest periods included below **Jumps** Rest as needed btwn 1a & 1b, 60-90 sec btwn sets **Lower legs** Rest ~30 sec btwn 1a/b, 45-60 sec btwn sets **Lifts** Same lift details as week 1 Compound lifts (1, 2, 3): Rest 2-3 min btwn sets | Isolation lifts rest 30 sec btwn 4a/b, 45-90 btwn sets **Conditioning** Suggested: non-impact (same machine as wk 1&3) Optional (joints feeling stellar): incline treadmill walk or stairs
	Weight Training	**Conditioning**	**Notes**
DAY 3 FOCUS *Easy Run*	**None**	**Easy Run** 4.5mi/45 minute easy run	**Easy Run** Choose milage or duration. Low-mid Z2
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Tempo + Pace Work*	**None**	**Tempo** 2 mile light jog warmup 3-4 x :20 strides 3.5 miles @ tempo 1:00 walk, 1:00 light recovery jog into 3x .5 mile (walk x 90 sec btwn 1&2, 2 min btwn 2&3) *(see notes for pacing)* 1.5-2 mile cooldown	**Tempo #3** Stick to pacing recs **3.5 Mi Tempo:** match +/- 5 sec/mi wk 3 **.5 mi segments (note slight adjustment)** Bout **1:** current 5 mi pace Bout **2&3:** goal 5 mi pace
	Weight Training	**Conditioning**	**Notes**
DAY 5 FOCUS *Pull + Hinge*	**Prep** Upper warmup (See p. 9 for lifting warmups) **Jumps** 1a) Hurdle jumps 3x4 1b) 1/2 kneel lateral med ball toss 3x3 ea **Main Lifts** 1) Upper back row 3x8-10 | 0-1 RIR 2) Chin ups 3x4-6 | 0-1 RIR 3) 45° back raise 2x10-12 | 0-1 RIR 4a) Spider Curl 2x8-10 | 0-1 RIR 4b) Rear delt fly 2x8-10 | 0-1 RIR 4c) cross bench ab mat crunch 2xmax	**None**	**Jumps** Rest 60 sec btwn 1a), 1b) & 60-90 sec btwn sets **Lower legs** none this week **Lifts** 1-3: Rest 2-3 min btwn sets Upper Back Row: machine, DB or T-bar Rest as needed between 4a/b/c, rest 1 min btwn sets
	Weight Training	**Conditioning**	**Notes**
DAY 6 FOCUS *Rest*	**None**	**None**	**Rest (TT wk incoming)**
	Weight Training	**Conditioning**	**Notes**
DAY 7 Shakeout	**None**	**Shakeout run** 15-20 min easy run w/ 3-4x 15-20 sec strides OR pickups	Shakeout = high Z1/very low Z2 Up to you whether you do strides or pickups

© 2026 Terminator Training Method, LLC. All rights reserved.

MID-PROGRAM
TT / DELOAD WEEK

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *PT Test + 2 Mi TT*	**Optional:** Hex DL 3RM HRPU or Push Up 2 min max Dead hang pull up max (or any practice PT tests that apply to you	**2 Mile Time Trial (TT)** 1-1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 2 Miles for time ⛽ 1 mile cooldown jog	**Lift Tests:** Optional **Suggested:** split into 2 sessions or lift, then run **Time trial:** note we didn't do a full taper into this run (just a light weekend) If you're not BLAZING, that's why. But you'll likely be much faster. Learn more about TTs on p. 10
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Rest)*	**None**	**None**	Rest Day
	Weight Training	**Conditioning**	**Notes**
DAY 3 FOCUS *5 Mi TT*	**None**	**5 Mile TT** .75-1 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 5 Miles for time ⛽ .5-1 mile cooldown jog	**Time trial:** Shorter warmup = intentional (longer runs...shorter warmups)
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Rest*	**None**	**Rest Day** (or 2/5 Mile Makeup)	Chill out or do a missed time trial if applicable
	Weight Training	**Conditioning**	**Notes**
DAY 5 FOCUS *Full + Easy Run*	**Prep** 1a) Pushup plus 3x5-7 1b) Face pull 3x10-12 1c) Backward Drag 3x 1:00 **Lifts (see notes)** Squat of choice 2-3 x 5-7 | 3-4 RIR Hinge of choice 2-3 x 5-7 | 3-4 RIR Horiz. Press of choice 2-3 x 6-8 | 3-4 RIR Chest suppt row of choice 2-3x 6-8 | 2-3 RIR	**Easy Run** 20-30 min **OR** 30-45 minute easy Cross Training	**Lift Criteria:** Choose a movement pattern you did in phase 1 **Suggested:** Low/no axial load squat (belt, pendulum, leg press best options) Non-barbell movements (a BB hinge is acceptable) **Conditioning:** hit both TTs? Suggest Cross Training Hit a TT on makeup day? Suggest swapping today's entire session w/ tom **Goal today:** Not gains. Light work full body going into next phase
	Weight Training	**Conditioning**	**Notes**
DAY 6 FOCUS *Rest or Light Day*	**None**	**Suggested: Rest Day** Feeling Spry AND didn't run yesterday? 20-30 min easy run 3-5x 20 sec incline strides	Be honest with yourself about how you're feeling. Taking a rest day is likely the most prudent option for most people Plenty more gains to come in phase 2
	Weight Training	**Conditioning**	**Notes**
DAY 7 REST	**None**	**None**	**Phase 2 Incoming**

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 2 | WEEK 1

	Weight Training	Conditioning	Notes
DAY 1 FOCUS Power + PT + lower leg + Ez Run	**Power/Stability** 1a) KB Swing 3x5 1b) Alternating lunge jump 3x5 for max height 2) KB single arm overhead carry 3x50 yd **Main Lift** 1) Hex Bar DL 3x2-4 | RPE 8 **Cals** 1) Pushup or HRPU: 75 sec (105 sec rest) | 60 sec (75 sec rest) | 60 sec 2) Pull up 2x 1-2RIR, 1x rest/pause (see notes) 3) Plank (optional): 4:00 density set **Lower Legs** Seated Calf raise 3x6-8 | RIR 1 Tib raise 3x10-12 | RIR 1	**Easy Run** 4.5 mi/45 min easy run	**Prep** 1a/b) Rest 60-90 sec btwn sets 2) rest if needed, not required. Can swap hands & go. KB swing: heavy, focus on powerful hip extension Lunge jump = 5 for each leg (10 total jumps per set) KB OH carry - start light, goal is overhead stability **Main Lift** Rest 2-4 min btwn sets—Heavier load than phase 1 (lower rep range) Ideally start w/ 10-20# less than 3RM, but use RPE **Cals** Back to 3 straight sets of pushups. Choose pushup variant based on test. Pull up rest/pause: 2-3 min btwn sets 1&2 Do 2nd set to 1 RIR, rest 20 sec, do another mini set to failure **Plank:** Optional **Lower Legs:** same deal as phase 1, slightly increased rep range **Easy Run:** Choose milage or duration. Low-mid Z2
DAY 2 FOCUS *Speed Work (5 mi)*	**None**	**5 Mi/10K Bias Speed Work** 1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) Pt 1: 2x1mi Work:Rest: 1:.25 (rest activity: walk) ---rest 3:00--- Pt 2: 4x200m Work:Rest: 1:.5 (rest activity: jog) ---rest 4:00 --- Pt 3: 1x1mi ---rest 3:00 --- Pt 4: 2x200m Work:Rest: 1:2.5 (rest activity: walk/stand)	**Speed Work** Pt 1: (2x1mi) @ 2-5 sec/mi faster than 5 mi TT pace Pt 2: (4x200s) @ 5-7 sec/mi faster than pt 1 avg pace Pt 3: (1mi) Match/beat by 1-5 sec pt 1 avg mile pace Pt 4: (2x200) fastest repeatable (longer rest = intentional) Rest between rds = full rest **Pacing example** pt 1. If you ran 6:30 splits for your 5 mi last wk, goal this wk = 6:25-6:28 *You'll rest 1/4 of that time (pre-set this in your watch based on expected times) pt 2. if you averaged 6:26 for both miles on pt 1, run 200s at 6:19-6:21. *rest (jog) 1/2 the duration it takes you to run 200m, then 3:00 after last 200 pt 3. goal is no slower than current 5 mi split, no faster than fastes pt 1
DAY 3 FOCUS *Rest*	**None**	**None**	**None**
DAY 4 FOCUS *Legs + Hill Sprint*	**Prep** Lower Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Seated box jumps 3x3 1b) Pogos w/ integrated high hops 3x5-7 (a handful or so low pogos between high hops) **Lifts** 1) Glute Ham Raise 3x8-12 | 1-2 RIR 2) Squat 2x5-7, 1x7+ | 2-3 RIR freeweight, 1-2 RIR belt 3) Hip thrust 2x6-8 | 1-2 RIR 4a) Xtra ROM Leg extension 2x8-12 | 0-1 RIR 4b) Suitcase carry x 30 sec/hand	**Hill Sprints** 2 mi/20 min easy jog warmup On as steep a hill as possible 3x10 sec sprint w/ ramping RPE 6-7, 7-8, 8-9 (rest 1 min) 10x10 sec max effort hill sprint Rest: full rest x 2 min 2 mi/20 min easy cooldown	**Jumps** Rest 90 sec btwn a/b, 90 sec btwn sets **Lifts** - Rest 2-3 min btwn all - Rest as needed between 4a/b, 60-90 sec btwn sets - Can't hit 8-12? Go to 1-2 RIR. Can do more than 12? option a) slow tempo (most ppl can't do 12 proper GHRs) b) add load (you're a .0001%-er) - Squat: choose most comfortable option–machine/BB/SSB. Same or different from ph. 1 - Hip thrust: use machine if availabe (easier set up). BB = option 2 - Leg ext: consider extra ROM w/ yoga blocks (demo in intro) - Suitcase: load that challenges you, but can maintain posture **RIRs constant throughout phase** **Last hill sprint session of program** Same as phase 1, 10 reps **Warmup/coldown** - Z1/low Z2
DAY 5 FOCUS *Upper + Easy Run*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jump&Pump** 1a) Bumper plate Jumping Pushups x8 1b) Full ROM lat prayer x 6-8 | 2-3 RIR **Main Lifts** 1) Machine Flat Press 2x 6-8, 1x 8+ | 1-2 RIR all sets 2) Chest suppt row 2x 6-8, 1x 8+ | 0-1 RIR 3a) Lat Pulldown 2x10-12 | 1-2 RIR 3b) Deficit pushup 1&1/2 rep 2x | 0-1 RIR **ArmFarm (optional)** 1a) Tricep pressdown 2-3x8-10 | 0-1 RIR 1b) Face pull (overhand grip) 2-3x10-12 | 0-1 RIR 1c) Rope hammer curl 2-3x8-10 | 0-1 RIR	**Easy Run** 10K (6.2Mi)/60 minute easy run	**Jump&Pump** Jump p/u = 8 total reps (will climb weekly) Lat prayer: goal = mobility/shoulder prep **Main Lifts** - Rest 2-3 min btwn sets on 1 & 2 - Press: any flat machine, (set 3 drop load by 10%) - Chest suppt row: any upper back - Pulldown: rest 60-90 sec before pushups - Deficit pushup 1&1/2 reps: See demo. If doing more than 20 reps, slow down tempo. **ArmFarm** (optional—will have no affect on run gains) Rest as needed between 1a/b, rest 45-60 btwn b/c (both involve biceps) Rest 45-75 sec btwn sets **Easy Run:** Choose milage or duration. Low-mid Z2.
DAY 6 FOCUS *Long*	**None**	**Long Run** 14 mile run, Z2 **Or** **Ruck** 9-11 mi	**Run/Ruck** No change from phase 1
DAY 7 REST	**None**	**None**	Rest Day

PHASE 2 | WEEK 2

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Speed Work (2 mi)*	**None**	**Speed Work (2Mi/5k bias)** 2 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) **Pt 1:** 2 rounds of 3x800m (6x800 total) Work:rest rd 1 & 2 - 1:.5 (rest activity: walk) --Rest 3:00 btwn ROUNDs 1&2 (3rd & 4th 800)--- --rest 4:00 btwn PARTs 1&2 (btwn 6th 800 & 1st 200)--- **Pt 2:** 2 rounds of 3x200m (6x200 total) Work: rest rd 1 - 1:1 (rest activity: jog) rd 2 - 1:1 (rest activity: walk) ----Rest 2:00 btwn ROUND 1&2--- 2 mi easy cooldown jog	**Pacing/rest examples:** **Pt 1: 2 rds of 3x800** (6x800 total) Rd1: 3x800: current 2 mi pace. (1:.5 wrk:rst/walk) **---Rest 3:00--- (full rest, light walk at most)** Rd 2: 3x800: 2 mi TT pace 2-4 sec/m faster. (1:.5 wrk:rst/walk) **---Rest 4:00--- (full rest, light walk at most)** **Pt 2: 2 rnds of 3x200** (6x200 total) Rd 1: 3x200: match - 2 sec/mi faster than 2nd rd of 800s (1:1/jog) **---rest 2:00--- (full rest, light walk at most)** Rd 2: 3x200: 2-4 sec/mi faster than rd 1 200s (1:1 walk) **Examples:** Mid program 2 mi = 12:00 aka 6:00/mi 1st 3 800s: goal = 6:00/mi 2nd 3 800s: goal = 5:56-5:58/mi 1st 3 200s: goal 5:54-5:56/mi 2nd 3 200s: goal 5:50-5:52/mi
DAY 2 FOCUS *Push + Quad + Cross Training*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps/Lower leg** 1a) Single leg pogos w/ light lateral mvmt x :20 ea 1b) Bumper plate jump pushups x 10 2a) Standing/straight leg Calves 2x7-10 2b) Tib raises 2x8-12 **Lifts** 1) Low incline Press 3x6-8 | 1-2 RIR 2) High Incline Smith/machine Press 2x6-8 | 1-2 RIR 3) Reverse Nordic 2x8-10 | 1 RIR 4a) Close grip pushup 3xmax 4b) Cable Y raise 3x8-10 | 0-1RIR	**Cross Training** 75 minute easy z1/low z2 Cross-training modality of choice	**Jumps/Lower leg** Rest as needed between 1a/b, 60-90 sec btwn sets Pogos - instead of jumping straight up, slightly side/side Jump pushups - 10 total reps (1 rep = 1 pushup w/ jump) Calf/tib: rest as needed btwn 2a/b, 1 min btwn sets **Lifts** - Rest 2-3 min btwn 1-3 - Rest as needed btwn 4a/b, 60-90 sec btwn sets - Low incline Press: 10-20° incline, machine or DBs - High incline press: ~70°, not direct overhead - Reverse Nordic: use band/ankle support (in demo) as needed - Close grip pushups: hands ~ shoulder width or just inside (not too close) - Cable Y raise: use wrist cuffs if able **Cross Training** Can use same modality as phase 1, or switch it up. Options: bike (air/spin/erg/recumbant), row, ski, elliptical, Jacob's Ladder, Versa climber, swim.
DAY 3 FOCUS *Easy Run*	**None**	**Easy Run** 6mi/60 minute easy run	**Easy Run** Choose milage or duration. Low-mid Z2, ideally non-paved surface
DAY 4 FOCUS *Tempo*	**None**	**Tempo** 2 mile light jog warmup 3-4 x :20 strides 5 miles at 15-20 sec/mi slower than recent 5 mile 2 mile cooldown	**Tempo** The most basic of tempos. Session should be a 7-8 RPE. Dial pace back if it's higher than that
DAY 5 FOCUS *Pull + Hinge*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps/Throws** 1a) Drop step box jumps 3x3 1b) Standing lateral med ball toss 3x3ea **Main Lifts** 1) Xtra ROM cable row 3x8-10 | 1-2 RIR 2) Chin ups 2-3, 4-5, 6-7 | 1-2 RIR 3) RDL 2x6-8 | 1-2 RIR 4a) Preacher Curl 2x8-10 | 1-2 RIR 4b) Incline bench reverse crunch 2xmax	**None**	**Jumps/Throws** Rest 60 sec btwn 1a/b, 60-90 sec btwn sets - Drop step box jumps - choose a box you're 100% confident in landing. Max effort jumps. Step/crawl (don't jump) off box - Lateral ball toss : 3 throws left, brief rest, then 3 throws right **Main Lifts** - Rest 2-3 min btwn 1-3 - Rest as needed btwn 4a/b, 60-90 sec btwn sets - Xtra ROM row: controlled, no herkey jerkey business - Chin ups: add load as needed. Can opt for rings/angles 90s - RDL: choose any of 3 RDL options (DB/BB/hex) - Preacher Curl: DO NOT fully straighten at bottom— 90% straight - Incline reverse crunch: Cue = pelvis to ribcage (not knees to elbows—that'll happen automatically if you do it right)
DAY 6 FOCUS *Long*	**None**	**Long Run** 15 miles, Z2 **Or** **Long Ruck** 10-12 mi	**Run/Ruck** No change from phase 1
DAY 7 REST	**None**	**None**	Rest Day

PHASE 2 | WEEK 3

	Weight Training	Conditioning	Notes
DAY 1 FOCUS Power + PT + lower leg + Ez Run	**Power/Stability Prep** 1a) KB Swing 3x6 1b) Alternating lunge jump 3x5 for max height 2) KB single arm overhead carry 3x50 yd **Main Lift** 1) Hex Bar DL 3x2-4 | RPE 8.5 **Cals** 1) Pushup or HRPU: 90 sec (105 sec rest) | 60 sec (75 sec rest) | 60 sec 2) Pull up 2x 1-2RIR, 1x rest/pause (see wk 9 notes) 3) Plank (optional): Max duration, rest 1:30 Set 2: hold x 80% of set 1 **Lower Legs** Seated Calf raise 2x5-7 | RIR 1 Tib raise 2x10-12 | RIR 1	**Easy Run** 5 mi/50 min easy run	**Prep** 1a/b) Rest 60-90 sec btwn sets 2) Rest if needed, not required. can swap hands & go - KB swing: heavy, focus on powerful hip extension; +1 rep on swings from Ph 2 Week 1. - Lunge jump: 5 each leg (10 total jumps per set) - KB OH carry: Can add load to carry if appropriate. **Main Lift** Rest 2-4 min btwn sets. Higher RPE. Keep same load if you didn't hit 4 in wk 9 (Ph 2 Wk 1). Hit 4 in wk 9? Add ~10# **Cals** Push ups: minor adjustments in duration Pull up rest/pause: 2-3 min btwn sets 1&2, 30 sec btwn 2&3 Pull ups: try to get another rep or 2 (across sets) > wk 9 **Lower Legs:** No change, add load as needed **Easy Run:** Choose milage or duration. Low-mid Z2

	Weight Training	Conditioning	Notes
DAY 2 FOCUS *Speed Work (Long Hills)*	**None**	**Hill Repeats** 2 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 3 rds of 4x1:00 hill repeats (12x1:00 total) Rest 90 sec (walk/jog to base) btwn repeats ---rest 3:00 btwn rounds--- After last uphill, you'll rest 1-2 min, then do: 3x:45 downhill repeats (walk slowly back up & re-run) Effort: RPE 8-9 uphill, RPE 8 downhill 2 mi easy cooldown jog	**Hill Repeats** Not hill sprints, hill *repeats* (must be able to repeat the effort w/ the longer durations and shorter rests) Choose moderately steep hill (3-5% grade) No pacing included, but your current 2 mile pace is a good start From there you can adjust up or down based on repeatability/RPE For downhill repeats: remain controlled, don't outrun your headlights

	Weight Training	Conditioning	Notes
DAY 3 FOCUS *Rest*	**None**	**None**	Rest Day

	Weight Training	Conditioning	Notes
DAY 4 FOCUS *Legs + Easy Run*	**Prep** Lower Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Seated box jumps 3x3 1b) Pogos w/ integrated high hops 3x5-7 (a handul or so low pogos between high hops) **Lifts** 1) Glute Ham Raise 3x8-12 | 1-2 RIR 2) Squat 2x5-7, 1x7+ | 2-3 RIR freeweight, 1-2 RIR belt 3) Hip thrust 2x6-8 | 1-2 RIR 4a) Xtra ROM Leg extension 2x8-12 | 0-1 RIR 4b) Suitcase carry x 30 sec/hand	**Easy Run** 8 mile/80 minute easy run 5x20 sec strides on slight incline	**Jumps** Rest 90 sec btwn a/b, 90 sec btwn sets **Lifts (same notes as wk 9)** Rest 2-3 min btwn all lifts Optional: can turn hip thrusts/leg ext into stagger set if convenient Rest as needed between 4a/b, 60-90 sec btwn sets **Easy Run** Choose milage or duration. Mid Z2. Incline strides: ~2-4% grade

	Weight Training	Conditioning	Notes
DAY 5 FOCUS *Upper + Easy Run*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jump&Pump** 1a) Bumper plate Jumping Pushups x10 1b) Full ROM lat prayer x 6-8 **Main Lifts** 1) Machine Flat Press 2x 6-8, 1x 8+ | 1-2 RIR all sets 2) Chest suppt row 2x 6-8, 1x 8+ | 0-1 RIR 3a) Lat Pulldown 2x10-12 | 1-2 RIR 3b) Deficit pushup 1&1/2 rep 2x | 0-1 RIR **ArmFarm (optional)** 1a) Tricep pressdown 2-3x8-10 | 0-1 RIR 1b) Face pull (overhand grip) 2-3x10-12 | 0-1 RIR 1c) Rope hammer curl 2-3x8-10 | 0-1 RIR	**Easy Run** 3.5 mile/35 minute easy run	**Jump&Pump** Jump p/u = 10 total reps (will climb weekly) Lat prayer: goal = mobility/shoulder prep **Main Lifts** Rest 2-3 min btwn sets on 1 & 2 Rest 60-90 sec btwn 3a/b and sets **ArmFarm** All 0-1 RIR Rest as needed between 1a/b, rest 45-60 btwn b/c (both involve biceps) Rest 45-75 sec btwn sets **Easy Run** Choose milage or duration. Low-mid Z2–tomorrow's a doozy

	Weight Training	Conditioning	Notes
DAY 6 FOCUS *Long Qual Run*	**None**	**Long Run w/ quality** 15 mile run, Z2 *Pacing:* 0-3 easy, z1 into z2 Between miles 3 & 7: Run 3x.5 mi segments @ current 5 mi pace (split by at least 3 min) Mi 7-9 easy Z2 Mi 9-10 @ 15-20 sec/mi slower than current 5 mi pace Mi 10-12 @ easy Z2 Mi 12-12.5 @ goal 5 mi pace (optional—if feeling great) Mi 12.5-15 easy Z2	**Pacing example** Hypothetical 5 mi pace: 6:30/mi Hypothetical goal pace: 6:22/mi 1st 3 miles – easy From miles 3-7– Run 6:30/mi for 3 different .5 mile stretches. Last time you can do it is mi 6.5-7. Ensure each goal pace effort is 3+ minutes (of easy running) after completing the last one. Miles 7-9 – Back to easy x 2 miles Mile 9-10 – 6:45-6:55 Miles 10-12 – back to easy Miles 12 - 12.5 – ONLY IF FEELING GREAT: ~6:22/mi Miles 12.5-15 – back to easy

	Weight Training	Conditioning	Notes
DAY 7 REST	**None**	**None**	Rest Day

PHASE 2 | WEEK 4

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Rest*	**None**	**Rest Day (Light Week)**	**Reset After a Savage Weekend Run**

	Weight Training	Conditioning	Notes
DAY 2 FOCUS *Deload* *Push + Quad +* *Cross Training*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps/Lower leg** 1a) Single leg pogos w/ light lateral mvmt 2x :20 ea 1b) Bumper plate jump pushups 2x 10 2a) Standing/straight leg Calves 1x7-10 2b) Tib raises 1x8-12 **Lifts** 1) Low incline Press 2x6-8 | 1-2 RIR 2) High Incline Smith/machine Press 1x6-8 | 1-2 RIR 3) Reverse Nordic 1x8-10 | 1 RIR 4a) Close grip pushup 2xmax 4b) Cable Y raise 2x8-10 | 0-1RIR	**Cross Training** 45 minute easy z1/low z2 Cross-training modality of choice	**Deload Lift** -1 Set for each lift Feel free to maintain intensity or drop to ~6-7 RPE if needed **Conditioning** Suggest keeping modality constant

	Weight Training	Conditioning	Notes
DAY 3 FOCUS *Easy Run or* *Cross Training*	**None**	**Easy Run + Strides** 3-4mi/30-40 minute easy run 3-5 x 20-30 sec incline strides **Or** 30-45 min Xtrain, Z2	**Easy run** Choose milage or duration. High Z1-Low Z2 If joints are banged up, Cross Training suggested **Strides:** 2-4% incline

	Weight Training	Conditioning	Notes
DAY 4 FOCUS *Easy Run or* *Cross Training*	**None**	**Easy Run** 6-7 mi/60-70 minute easy run **Or** 60-75 min Xtrain, Z2	**Easy run** Choose milage or duration. High Z1-Low Z2 If joints are banged up, Cross Training suggested

	Weight Training	Conditioning	Notes
DAY 5 FOCUS *Deload Pull +* *Hinge*	**Prep** Upper Warmup **Jumps/Throws** 1a) drop step box jumps 2x3 1b) standing lateral med ball toss 2x3ea **Main Lifts** 1) Xra ROM cable row 2x8-10 | 1-2 RIR 2) Chin ups 3x3-4 RIR (BW) | 1-2 RIR 3) DB/BB/hex RDL 1x6-8 | 1-2 RIR 4a) Preacher Curl 1x8-10 | 1-2 RIR 4b) Incline bench reverse crunch 1-2xmax	**None**	Same lift details as Ph 2 W 2 Rest periods included below **Prep** no change from ph. 1 **Jumps/Throws** -1 set ea Rest 60 sec btwn 1a/b, 60-90 sec btwn sets Drop step box jumps - choose a box you're 100% confident in landing **Main Lifts** -1 set ea Rest 2-3 min btwn 1-3 Rest as needed btwn 4a/b, 60-90 sec btwn sets

	Weight Training	Conditioning	Notes
DAY 6 FOCUS *Long (deload)*	**None**	**Long Run OR Cross Training** Run: 8-10 miles, Z2 Cross Training: 75-100min, Z2	**Questioning it?** Opt for Cross Training Big intensity/volume weeks incoming

	Weight Training	Conditioning	Notes
DAY 7 REST	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 2 | WEEK 5

	Weight Training	Conditioning	Notes
DAY 1 FOCUS Power + PT + lower leg + Ez Run	**Power/Stability** 1a) KB Swing 3x6 1b) Alternating lunge jump 3x6 for max height 1c) KB single arm overhead carry 3x50 yd **Main Lift** Hex Bar DL 3x2-4 | RPE 9 **Cals (#) = seconds rest** 1) Pushup or HRPU 75 sec (105 sec rest) | 75 sec (90 sec rest) | 75 sec 2) Pull up 2x 1-2RIR, 1x rest/pause (wk 9 notes) 3) Plank (optional): Max duration, rest 1:30 Set 2: hold x 80% of set 1 **Lower Legs** Seated Calf raise 2x5-7 | RIR 1 Tib raise 2x10-12 | RIR 1	**Easy Run** 6 mi/60 min easy run	**Prep** +1 jump (the rest of the notes are the same as Ph 2 Wk 3) 1a/b) Rest 60-90 sec btwn sets 2) Rest if needed, not required. can swap hands & go **Main Lift** Rest 2-4 min btwn sets. Higher RPE - Keep same load if you didn't hit 4 in Ph 2 Wk 3 (week 11) Hit 4 in wk 11? Add ~10# **Cals** Push ups: minor adjustments in duration Pull up rest/pause: 2-3 min btwn sets 1&2, 30 sec btwn 2&3 Pull ups: try to get another rep or 2 (across sets) > wk 9 **Lower Legs:** no change, add load as needed **Easy Run:** Choose milage or duration. High Z1-Low Z2.
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Speed Work (2/5 mi)*	**None**	**Speed Work (5 mi + 2 mi)** 2 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) Pt 1: 3x1mi Work:Rest: 1:.25 (jog btwn 1&2, walk btwn 2&3) ---rest 5:00 btwn Pt 1&2--- Pt 2: 4x400m Work:Rest: 1:.75 (rest activity:jog) 1.5 mi easy cooldown jog	**Pt 1:** (3x1mi) @ 5 mi TT pace +/- 5 sec/mi, start conservative, negative split (8 sec cap) **Pt 2:** (4x400s) @ 2 mi TT pace +/- 5 sec/mi, start conservative, negative split (5 sec cap) **Pacing example** Pt 1: Hypothetical 5 mi: 32:30 aka 6:30/mi Mi 1: ~ 6:30 Mi 2: ~ 6:28 Mi 3: ~ 6:26 8 sec cap = last mile shouldn't be more than 8 sec faster than 1st Pt 2: Hypothetical 2 mi: 12:00 aka 6:00/mi 1st 400: 6:00/mi 2nd 400: 5:58/mi 3rd 400: 5:57/mi 4th 400: 5:56/mi 5 sec cap = last 400 shouldn't be more than 5 sec faster than 1st
	Weight Training	**Conditioning**	**Notes**
DAY 3 FOCUS *Easy Run*	**None**	**Easy Run** 5 mile/50 min Easy Run	Choose milage or duration. Light 5mi, high Z1/low Z2
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Legs + Bike Sprint*	**Prep** Lower Warmup (See p. 9 for lifting warmups) **Jumps** 1a) Seated box jumps 3x3 1b) Pogos w/ integrated high hops 3x5-7 (a handul or so low pogos between high hops) **Lifts** 1) Glute Ham Raise 3x8-12 | 1-2 RIR 2) Squat 2x5-7, 1x7+ | 2-3 RIR freeweight, 1-2 RIR belt 3) Hip thrust 2x6-8 | 1-2 RIR 4a) Xtra ROM Leg extension 2x8-12 | 0-1 RIR 4b) Suitcase carry x 30 sec/hand	**Airbike Sprints** 10-12 min EZ pedal warmup 10x8 sec max effort airbike sprint | RPE 10 Rest: full rest x 1 min, easy pedal x 30 sec into next sprint 10-12 min EZ pedal cooldown	**Jumps** Rest 90 sec btwn a/b, 90 sec btwn sets **Lifts** (see full notes on Ph 2 Wk 1) Rest 2-3 min btwn all lifts Optional: can turn hip thrusts/leg ext into stagger set if convenient Rest as needed between 4a/b, 60-90 sec btwn sets **Airbike Sprints** These are not cardio. Speed/fast twitch development If anything, longer rest > shorter so you're fresh for all
	Weight Training	**Conditioning**	**Notes**
DAY 5 FOCUS *Upper + Easy Run*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jump&Pump** 1a) Bumper plate Jumping Pushups x12 1b) Full ROM lat prayer x 6-8 **Main Lifts** 1) Machine Flat Press 2x 6-8, 1x 8+ | 1-2 RIR all sets 2) Chest suppt row 2x 6-8, 1x 8+ | 0-1 RIR 3a) Lat Pulldown 2x10-12 | 1-2 RIR 3b) Deficit pushup 1&1/2 rep 2x | 0-1 RIR **ArmFarm (optional)** 1a) Tricep pressdown 2-3x8-10 | 0-1 RIR 1b) Face pull (overhand grip) 2-3x10-12 | 0-1 RIR 1c) Rope hammer curl 2-3x8-10 | 0-1 RIR	**Easy Run** 6 mile/60 minute easy run	**Jump&Pump** Jump p/u = 12 total reps (will climb weekly) Lat prayer: goal = mobility/shoulder prep **Main Lifts** Rest 2-3 min btwn sets on 1 & 2 Rest 60-90 sec btwn 3a/b and sets **ArmFarm** Rest as needed between 1a/b, rest 45-60 btwn b/c (both involve biceps) Rest 45-75 sec btwn sets **Easy Run** Choose milage or duration. Low-mid Z2, tomorrow's a doozy
	Weight Training	**Conditioning**	**Notes**
DAY 6 FOCUS *Long Qual Run*	**None**	**Long Run w/ Quality/strong finish** 17 mile run, Z2 Mi 0-3 - Z2 Mi 3-3.5 @ current 5 mi pace Mi 3.5-6 - Z2 Mi 6-6.5 @ current 5 mi pace Mi 6.5-14 - Z2 Mi 14-15.5 Increase RPE by .5 every 1/2 mile | RPE 7, 7.5, 8 Mi 15.5-17 - Z2	**Long Run** Follow pacing guidelines
	Weight Training	**Conditioning**	**Notes**
DAY 7 REST	**None**	**None**	Rest Day

© 2026 Terminator Training Method, LLC. All rights reserved.

PHASE 2 | WEEK 6

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Speed Work (2 mi)*	**None**	**Speed Work (2 mi bias)** 2 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 **Pt 1:** 2 rounds of 5x400m (10x400 total) Work:rest - rd 1 & 2= 1:.5 (jog rd 1, walk rd 2) --Rest 3:00 btwn ROUNDs 1&2--- ---rest 4:00 btwn PARTs 1 & 2-- **Pt 2:** 4 rounds of 3x200m (12x200 total) Work:rest - Rd 1-3 = 1:1 (jog), rd 4 = 1:2.5 (walk/stand) ---Rest 1:30 btwn rds 1-4--- 1.5 mi easy cooldown jog (See notes for pacing)	**Pacing:** **Pt 1:** 400s Rd 1: match Ph 2 Wk 2 2nd round 800 pace +/- 2 sec ---rest 3:00--- Rd 2: 2-4 sec/mi faster than rd 1 pace ---rest 4:00--- **Pt 2:** 200s 1st 3 rounds: 1-3 sec/mi faster than rd 2 400s ---rest 90 sec btwn rds--- last rd: fastest repeatable (note long rest) Examples: Ph 2 Wk2 Rd 2 800 5:55/mi **Pt 1: 400s** 1st 5 400s: goal = ~5:53-5:57 (actual example result: 5:54) 2nd 5 400s: goal = 5:50-5:52 (actual example result: 5:51) **Pt 2:** 200s Rds 1-3 5:48-5:50 Rd 4: likely in the 5:40-5:45 range (but must be repeatable)
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Push + Quad + Cross Training*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps/Lower leg** 1a) Single leg pogos w/ light lateral mvmt 3x :30 ea 1b) Bumper plate jump pushups 3x 12 2a) Standing/straight leg Calves 2x7-10 2b) Tib raises 2x8-12 **Lifts** 1) Low incline Press 3x6-8 | 1-2 RIR 2) High Incline Smith/machine Press 2x6-8 | 1-2 RIR 3) Reverse Nordic 2x8-10 | 1 RIR 4a) Close grip pushup 3xmax 4b) Cable Y raise 3x8-10 | 0-1RIR	**Cross Training** 75 minute easy z1/low z2 Cross-training modality of choice	**Prep** Upper Warmup (no change from ph. 1) **Jumps/Lower leg** (Same details as Ph 2 Wk 2) Rest as needed between 1a/b, 60-90 sec btwn sets Jump pushups - 12 total reps (1 rep = 1 pushup w/ jump) Calf/tib: rest as needed btwn 2a/b, 1 min btwn sets **Lifts** Rest 2-3 min btwn 1-3 Rest as needed btwn 4a/b, 60-90 sec btwn sets **Cross Training** suggest keeping modality constant
	Weight Training	**Conditioning**	**Notes**
DAY 3 FOCUS *Easy Run*	**None**	**Easy Run** 8mi/75-80 minute easy run	Choose milage or duration. Longer easy run. Keep very light to prep for tomorrow
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Tempo/Fartlek*	**None**	**Tempo + Fartlek (4, 3, 2, 1)** 2 mi easy jog warmup **Run warmup** (see pg 13 for details) **Session - Pt 1.** 12 minutes @ 10-15 sec/mi slower than 5 mi ---3:00 recovery: 1 min walk, 1 min jog, 1 min walk--- **Pt 2. 4 rounds of:** 400m run @ goal 5 mi pace 300m run @ 1/2 way btwn goal 2 & 5mi pace 200m run @ goal 2 mile pace 100m run @ projected *1 mi TT pace or 2-3 sec/mi faster than 200 Recovery between EACH DISTANCE = 200m total, 100m walk, 100m jog, alternating every 50m (cap 2:00) 1.5 mi easy jog cooldown	**Pacing Examples:** Hypothetical 5 mile TT pace: 6:30/mi Goal pace: 6:15-6:20 Hypothetical 2 mile TT pace: 6:00/mi Goal pace: 5:50-5:55 Projected 1 mi pace: 7-12 sec/mi faster than 2 mi split (closer to 7 for advanced, 12 for less advanced). This example: 5:52 (-8 sec) Pt 1 Tempo: 6:40-6:45/mi Pt 2 Fartlek rounds: 400 ~6:15-6:20/mi 300 ~6:00-6:05/mi 200: ~5:52 (+/- 2 sec) 100: ~5:45-5:50 (or a few sec faster than 200) Cap = no longer than 2:00 for rest period, but can start sooner if ready
	Weight Training	**Conditioning**	**Notes**
DAY 5 FOCUS *Pull + hinge*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jumps/Throws** 1a) Drop step box jumps 3x3 1b) Standing lateral med ball toss 3x3ea **Main Lifts** 1) Xtra ROM cable row 3x8-10 | 1-2 RIR 2) Chin ups 2-3, 4-5, 6-7 | 1-2 RIR 3) DB/BB/hex RDL 2x6-8 | 1-2 RIR 4a) Preacher Curl 2x8-10 | 1-2 RIR 4b) Incline bench reverse crunch 2xmax	**None**	**Prep:** no change from ph. 1 **Jumps/Throws** Rest 60 sec btwn 1a/b, 60-90 sec btwn sets Drop step box jumps - choose a box you're 100% confident in landing Lateral ball toss : 3 throws left, brief rest, then 3 throws right **Main Lifts** Rest 2-3 min btwn 1-3 Rest as needed btwn 4a/b, 60-90 sec btwn sets Same lifting notes as Ph 2 Wk 2
	Weight Training	**Conditioning**	**Notes**
DAY 6 FOCUS *Long*	**None**	**Long Run** 19 miles, Z2 **or** **Long Ruck** 12-14 mi ruck	**Run/Ruck** No change from phase 1
	Weight Training	**Conditioning**	**Notes**
DAY 7 REST	**None**	**None**	Rest Day

PHASE 2 | WEEK 7

	Weight Training	Conditioning	Notes
DAY 1 FOCUS Power + PT + lower leg + Ez Run	**Power/Stability** 1a) KB Swing 3x7 1b) Alternating lunge jump 3x6 for max height 1c) KB single arm overhead carry 3x50 yd **Main Lift** Hex Bar DL 3x2-4 | RPE 9 **Cals** 1) Pushup or HRPU 60 sec (90 sec rest) | 60 sec (30 sec rest) | max 2) Pull up 3x 1-2RIR, (no rest/pause) 3) Plank (optional): Max duration, rest 1:30 Set 2: hold x 80% of set 1 **Lower Legs** Seated Calf raise 2x5-7 | RIR 1 Tib raise 2x10-12 | RIR 1	**Easy Run** 10K (6.2 mi)/60 min easy run	**Prep** +1 rep on swings 1a/b) Rest 60-90 sec btwn sets 2) Rest if needed, not required. can swap hands & go **Main Lift** Rest 2-4 min btwn sets. Higher RPE - Keep same load if you didn't hit 4 in Ph 2 Wk 5 (wk 13) Hit 4 in wk 13? Add ~10# **Cals** Push ups: minor adjustments in duration Pull ups: 3x straight sets, no rest/pause this wk **Lower Legs** no change, add load as needed **Easy Run:** Choose milage or duration. Low/mid Z2.

	Weight Training	Conditioning	Notes
DAY 2 FOCUS *Speed Work (5 mi)*	**None**	**5 Mi/10K Bias Speed Work** 2 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 (see pacing in notes) **Pt 1:** 2x1mi Work:Rest: 1:.25 (rest activity: jog) ---rest 5:00--- **Pt 2:** 2x1mi Work:Rest: 1:.5 (rest activity: jog) 2 mi easy cooldown jog	**Pacing:** Pt 1: (2x1mi) @ 5 mi TT pace +/- 5 sec/mi, start conservative, negative split Pt 2: (2x1mi) @ 3-5 sec/mi faster than pt 1 avg pace **Pacing example** Pt 1. If your 5 mi split was 6:30/mi, goal for miles this wk = 6:25-6:35 *You'll rest 1/4 of that time (pre-set this in your watch based on expected times) Pt 2. if you averaged 6:32 for both miles in pt 1, 200s run at 6:29-6:27 *rest (jog) 1/2 the duration it takes you to run 200m

	Weight Training	Conditioning	Notes
DAY 3 FOCUS *Easy Run*	**None**	4 Mile/40 min Easy Run	Choose milage or duration. Light 4mi, high Z1/low Z2

	Weight Training	Conditioning	Notes
DAY 4 FOCUS *Legs + Easy Run*	**Prep** **Jumps** 1a) Seated box jumps 3x3 1b) Pogos w/ integrated high hops 3x5-7 (a handul or so low pogos between hi hops) **Lifts** 1) Glute Ham Raise 3x8-12 | 1-2 RIR 2) Squat 2x5-7, 1x7+ | 2-3 RIR freeweight, 1-2 RIR belt 3) Hip thrust 2x6-8 | 1-2 RIR 4a) Xtra ROM Leg extension 2x8-12 | 0-1 RIR 4b) Suitcase carry x 30 sec/hand	**Easy Run** 8 mile/80 minute easy run	**Jumps** Rest 90 sec btwn a/b, 90 sec btwn sets **Lifts** Rest 2-3 min btwn all lifts Optional: can turn hip thrusts/leg ext into stagger set if convenient Rest as needed between 4a/b, 60-90 sec btwn sets **Easy Run** Choose milage or duration. Low/mid Z2

	Weight Training	Conditioning	Notes
DAY 5 FOCUS *Upper*	**Prep** Upper Warmup (See p. 9 for lifting warmups) **Jump&Pump** 1a) Bumper plate Jumping Pushups x14 1b) Full ROM lat prayer x 6-8 **Main Lifts** 1) Machine Flat Press 2x 6-8, 1x 8+ | 1-2 RIR all sets 2) Chest suppt row 2x 6-8, 1x 8+ | 0-1 RIR 3a) Lat Pulldown 2x10-12 | 1-2 RIR 3b) Deficit pushup 1&1/2 rep 2x | 0-1 RIR **ArmFarm (optional)** 1a) Tricep pressdown 2-3x8-10 | 0-1 RIR 1b) Face pull (overhand grip) 2-3x10-12 | 0-1 RIR 1c) Rope hammer curl 2-3x8-10 | 0-1 RIR	**None**	**Jump&Pump** Jump p/u = 14 total reps Lat prayer: goal = mobility/shoulder prep **Main Lifts** Rest 2-3 min btwn sets on 1 & 2 Rest 60-90 sec btwn 3a/b and sets **ArmFarm** Rest as needed between 1a/b, rest 45-60 btwn b/c (both involve biceps) Rest 45-75 sec btwn sets No Conditioning to prep for tomorrow's finale!

	Weight Training	Conditioning	Notes
DAY 6 FOCUS *Long Qual Run*	**None**	**Long Run w/ Quality/strong finish** 20 mile run, Z2 If feeling great, add **4** separate **½-mile** stints during the run. Rules: - Start after mile 1 - Finish before the final mile - Keep at least 2 easy miles between each ½-mile effort (ex. mi 1.5-2, 4.5-5, 10-10.5, 14.5-15)	**Grand Finale Long Run** Guidlines explained in workout Please only speed up if you're feeling well rested/strong **Don't force it!**

	Weight Training	Conditioning	Notes
DAY 7 REST	**None**	**None**	Rest Day

FINAL TIME TRIAL/ DELOAD WEEK

	Weight Training	Conditioning	Notes
DAY 1 FOCUS *Full Body (Deload)*	**Rest Day**	**Rest Day**	This week is optional—if you want to hit these time trials, the way it's structured is the suggested sequence. If you do your runs too soon, they'll be slower coming off the entire program and a big weekend run
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Light Conditioning*	**None**	**Light conditioning** 20-30 min low Z2 cross train	Pick any non-impact modality, and keep it light. Options: bike (air/spin/erg/recumbant), row, ski, elliptical, Jacob's Ladder, Versa climber, swim.
	Weight Training	**Conditioning**	**Notes**
DAY 2 FOCUS *Light run*	**None**	**Shakeout run** 12-15 min w/ 3-4 20 sec strides	Easy Z2
	Weight Training	**Conditioning**	**Notes**
DAY 4 FOCUS *Tests*	**Optional:** Hex DL 3RM HRPU or Pull Up 2 min max Dead hang pull up max (or any practice PT tests that apply to you)	**2 Mile TT** 1-1.5 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 2 Miles for time 🚨 .5-1 mile cooldown jog	**Lift Tests:** Optional (can hit these sessions today or take another rest/shakeout day) **Suggested:** split into 2 sessions or lift, then run
	Weight Training	**Conditioning**	**Notes**
DAY 5 FOCUS *Rest*	**None**	**Rest Day**	*if you hit 2 mi yesterday, consider doing the 5 mi tomorrow*
	Weight Training	**Conditioning**	**Notes**
DAY 6 REST	**None**	**5 Mile TT** .75-1 mi easy run warmup plus 3-4 15 sec strides Allow HR to recover into Z1, then 👇 5 Miles for time 🚨 .5-1 mile cooldown jog	**Time trial:** Shorter warmup = intentional (longer runs...shorter warmups)
	Weight Training	**Conditioning**	**Notes**
DAY 7 REST	**Rest Day**	**Rest Day**	**Congratulations on completing the program!**
